Abstract: This article deals with the mathematical analysis of the inverse problem of identifying the unknown time-dependent coefficient in the quasilinear parabolic equation with the nonlocal boundary and integral overdetermination conditions. The existence, uniqueness and continuous dependence upon the data of the solution are proved by iteration method in addition to the numerical solution of this problem is considered with an example.

Keywords: Quasilinear parabolic equation, inverse problem, nonlocal boundary condition, finite difference method, integral overdetermination condition.

1 Introduction

Nonlocal boundary conditions such as (4) arise from many important applications in heat transfer, thermoelasticity, control theory, life sciences, etc. For example, in heat propagation in a thin rod in which the law of variation $E(r)$ of the total quantity of heat in the rod is given in [4]. In [3] the nature of (3)-type conditions is demonstrated. The problem of identifying of a coefficient are widely for mathematical modeling of various process of physics, chemistry, ecology and industry. For surveys on the subject, we refer the reader to [1, 6, 5, 7, 2] and the references therein.

Consider the problem of finding a pair of functions (x, u) satisfying the following quasilinear parabolic problem :

$$u_t = u_{xx} - p(t)u + r(t)f(x, t, u), \quad (x, t) \in D \quad (1)$$

$$u(x, 0) = \varphi(x), \quad x \in [0, 1], \quad (2)$$

$$u(0, t) = u(1, t), \quad u_x(1, t) = 0, \quad t \in [0, T], \quad (3)$$

$$E(t) = \int_0^1 u(x, t) dx, 0 \leq t \leq T, \quad (4)$$

where

$$D := \{0 < x < 1, 0 < t < T\}.$$

This problem will be called an inverse problem. The functions $\varphi(x)$ and $f(x, t, u)$ are given functions on $[0, 1]$ and $\hat{D} \times (-\infty, \infty)$, respectively.

Undetermined Coefficient Problems for Quasi-Linear Parabolic Equations, 1992 Our research efforts during the grant period were concerned with undetermined coefficient problems in partial differential equations focusing on three distinct areas problems where the unknown coefficients depend only on the dependent variables problems giving rise to first order equations where the boundary conditions and the coefficients in the equations have a nonlocal dependence on the variables and inverse spectral problems in which unknown coefficients have to be determined from eigenvalue data These problems originate from situations where one wants to recover unknown material properties or to determine the nature of an unknown physical law A number of theoretical results existence as well as uniqueness as well as computational algorithms were derived for model elliptic parabolic and hyperbolic equations During the period of the grant two major conferences were organized by the principal investigators 1 Ph D thesis was completed 17 publications appeared and an additional 5 manuscripts were submitted Inverse Problems in Diffusion Processes Heinz W.
