Application Software in Wide Area Network Settings M. Makpangou, 1990 Abstract Progress in methodologies for developing robust local area network software has not been matched by similar results for wide area settings. In this paper we consider the design of application software spanning multiple local area environments. For important classes of applications simple design techniques are presented that yield fault tolerant wide area programs. An implementation of these techniques as a set of tools for use within the ISIS system is described. [House documents](#), 1882 **Engineering World**, 1906 **Parliamentary Papers** Great Britain.
