Natural Products of Silk Road Plants Raymond Cooper, Jeffrey John Deakin, 2020-08-31 The Silk Road, a complex network of trade routes linking China with the rest of the Eurasian continent by land and sea, fostered transformation of the ethnic, cultural and religious identities of diverse peoples. In Natural Products of Silk Road Plants there is a treasury of plants many indigenous to countries along the trading routes of the Silk Road that yielded medicines, cereals, spices, beverages, dyes and euphoric and exotic compounds previously unknown to the rest of the world. This entry in the Natural Products Chemistry of Global Plants series has been prepared for university students of chemistry and ethnobotany and for those wishing to broaden their knowledge. It opens a window on a vast region of Asia not well described for its flora and provides new and fresh insights on significant plants, some endangered. Traditional and modern applications of extracts, the biochemical and pharmacological properties of extracts. Contains over 150 full-colour figures. The significance of the Silk Road is being revived today through immense investment by China and other eastern countries in major schemes of transport infrastructure.

Healing Plants of South Asia John A. Parrotta,2024-10-02 South Asia a region of outstanding biological diversity is home to approximately 2.1 billion people whose rich cultural traditions include sophisticated knowledge of the properties and uses of thousands of native and introduced plant species Plant based drugs integral to the traditional medical systems of India and neighboring countries play a central role in health care throughout the region and beyond as regional and global demand for therapeutically valuable plants continues to grow However the ongoing transformation and

degradation of forests and other natural ecosystems in this region due to rapid environmental and socioeconomic changes poses serious challenges for the conservation and sustainable utilization of its medicinal plant wealth. Efforts to conserve the region's rich biodiversity and associated traditional knowledge require up-to-date information on the status and trends of these resources and their importance for health care and livelihoods. Healing Plants of South Asia: A Handbook of the Medicinal Flora of the Indian Subcontinent helps to address this need. The work's introduction provides overviews of South Asia's diverse systems of traditional medicine as well as the region's biogeography, ecosystem, and plant species diversity and associated conservation challenges. Subsequent chapters focus on nearly 2,000 species of plants most commonly used in traditional medicine within the region. In chapters devoted to ferns and lycophytes (including 59 species), conifers (20 species), and flowering plants (1,849 species), the information provided draws upon a wide variety of authoritative published sources as well as reliable online databases. Entries for each species include currently accepted scientific names and common synonyms, vernacular names in the major regional languages, a complete botanical description, information on the species' ecology and conservation status, traditional therapeutic uses in Ayurveda, Unani, Siddha, Tibetan medicine, and more localized folk medical systems, and key references. The majority of these species are also beautifully illustrated with photos and/or botanical drawings. Healing Plants of South Asia: A Handbook of the Medicinal Flora of the Indian Subcontinent will be of value to students, scientists, and professionals in a number of fields including pharmacology, pharmaceuticals, food chemistry, and nutrition, natural products chemistry, ethnobotany, and ethnomedicine. It should also appeal to conservationists, community development practitioners, industry, and policy makers among a host of those involved in the world of medicinal plants and traditional medicine in South Asia.

The Tibetan Art of Healing Ian Baker, 1997. Romio Shrestha, Tibet's foremost traditional artist, uses the age-old technique of painting with rich minerals such as gold, lapis, and garnet to provide a beautiful recreation of revered 400-year-old Tibetan thangka on the art of healing, long considered lost. Tibetan scholar Ian Baker guides us through these exquisite paintings, unfolding their invaluable insights to remedies for a myriad of illnesses. Full color.

A Handbook of Medicinal Plants Narayan Das Prajapati, 2003. This book describes more than 1,346 medicinal plants found in the world. It includes vernacular names, description, distribution, part use, utilization, active principles, agronomic practices, and colour plates.
