***OECD Internet Economy Outlook ,2012 Challenges of Digitalization for the Music Industry***

Moritz Müller, 2013-08-08 Seminar paper from the year 2013 in the subject Business economics Offline Marketing and Online Marketing grade 1 3 University of M nster course Digital Media Marketing Seminar language English abstract This seminar paper analyses how the digitalization has changed the general set up of the music industry By analyzing studies and data the paper illustrates several challenges that influenced record sales Considering the different type of players in the music industry record labels online and physical retailers and artists this paper will only discuss the challenges and effects of the digitalization on the major record labels The challenges of digitalization for artists will not be covered in this paper digital music actually enhances the chance of being discovered and for reaching a larger audience Ankeny 2012 In this sense the

digitalization is an opportunity rather than a challenge for artists. This also applies for online retailers such as iTunes and Amazon. Since digital music does not require physical storage, online retailers can offer music at almost zero costs. Thus, online retailers benefit from the digitalization of music. Physical retailers presumably lose revenue because of the digitalization of music. However, their situation will not be discussed further in this paper. The major record labels are highly vertically integrated (Neff and Blumer 2003, p. 104). Besides managing artists, the recording companies are also in charge of the publishing and copyrights of music. Additionally, they have enormous production resources and strong distribution networks. This gives the major record labels a significant competitive advantage. However, this advantage was partly ruined by the digitalization. In this paper, digitalization of the music industry is limited to the impact of MP3s on the industry. The introduction of the CD as the first phase of digitalization is not further discussed. Chapter two deals with the challenge of piracy for the record companies. In chapter three, the increased competition as a challenge will be described. The change of the product music is discussed in chapter four. Chapter five presents the changing consumer behavior as the final challenge for the major record labels. Every chapter is concluded by presenting the reactions of the record labels to the respective challenges. The paper is rounded off by a conclusion in which the main points are summarized and a discussion of future strategies for the record labels.

**How do Fintech Startups and a Changing Consumer Behavior Reshape the Financial Services Industry?** Viktor Kanzler, 2015-05-18. Bachelor Thesis from the year 2015 in the subject Business economics, Business Management, Corporate Governance, grade 1, 3, Frankfurt School of Finance Management, language English, abstract. The purpose of this study is to illustrate how Fintech startups and other non-financial institutions reshape the finance industry as they take advantage of recent technology trends and lifestyle shifts affecting customers' expectations.

The thesis aims to show how the competitive landscape changes and to what extent digital attackers grab parts of the value chain. The study also maps out the Fintech landscape highlights important growth trends and gives an overview of the services and products with which Fintech startups are currently edging into the market. Moreover the study points out the specific drivers and barriers relevant to Fintech companies. A further objective was to find out whether Fintech startups pose a serious threat to traditional providers and if so which generic approaches exist to deal with these attackers. Apart from that the aim was to identify how peers address digitization as well as what strengths traditional banks can rely on. Last but not least the study demonstrates what banks and other institutions can learn from Fintech startups and how the future of finance could develop and look like in 2020. Digital media downloads mobile music streams music flat rates peer to peer networks and the rise of freeconomics on the Internet are partly responsible for the reduction in CD sales in recent years. The question that is most important for the industry is how the widespread of freely available content and illegal downloading can be monetised. One approach to model around the main threats to the music industry is the development of online music services. Thus this study is an attempt to address the issue of what are the opportunities and challenges posed by online music services for the music recording industry. Referring to empirical findings of a consumer survey and expert interviews both opportunities and challenges can be identified for the music recording industry. The opportunities surrounding the development of these services are encouraging. Deriving from the challenges the music recording industry must ensure that online music services are a supplement to traditional ways of consumption and do not turn into a replacement of physical music consumption. Concluding online music services have a small impact on the recording industry. The industry might benefit from closely cooperating with online music services by learning more about consumers tastes. Nevertheless the online businesses are struggling to break even and revenues from streaming will not overcome legal downloads or CD sales as major revenue stream anytime soon.
