*Wi-Fi Integration to the 4G Mobile Network* André Pérez, 2018-05-08 The adoption of smartphones has had as a corollary the use of services that require streaming such as video streaming which is a constraint for the 4G mobile network The integration of the network of Wi Fi hotspots deployed by the operators adds capacity to the 4G mobile network The use of Wi Fi technology in carrier networks is the result of developments coordinated by the IEEE WFA and WBA standardization bodies For its part the 3GPP standardization body has been working to integrate Wi Fi technology into the 4G mobile network The first part of this book presents the characteristics of the Wi Fi radio interface The different IEEE 802 11b g n ac physical layers characterize the implementation in the 2 4 GHz ISM frequency bands and U NII at 5 GHz The MAC layer defines a number of media access procedures such as scanning associating or transferring data The second part of this book deals with the architecture of the 4G network based on the Wi Fi interface This architecture defines several models corresponding on the one hand to Wi Fi access controlled or not On the other hand to a handover controlled by the network or by the mobile The integration of Wi Fi technology resulted in a redefinition of attachment and session set up procedures Smartphones have the ability to activate simultaneously the two radio interfaces LTE and Wi Fi which allows to direct certain services to one and or the other of the interfaces The ANDSF and HotSpot 2 0 functions provide the mobile with rules for network selection and traffic control to determine which traffic is to be routed to what type of interface

programs that you might not even know you have installed on your PC could be causing your PC to crash We show you how to root it out of your system and prevent further infection Andy Walker is one of North America s top technology journalists and is the author of Que s Absolute Beginner s Guide to Security Spam Spyware Viruses and Microsoft Windows Vista Help Desk Since 1995 he has written about personal computer technology for dozens of newspapers magazines and websites Today his columns and hundreds more technology how to articles are published at Cyberwalker com where more than 5 million unique visitors read the advice annually Andy co hosted the internationally syndicated TV show Call for Help with Leo Laporte Alongside his ongoing TV guest appearances he also hosts the popular tech video podcast Lab Rats at LabRats tv

**Routing in the Internet Using Partial Link State Information** Marcelo Spohn,2001 This thesis focuses on routing in wired and wireless segments of the Internet using partial link state information Although efficient algorithms have been proposed based on both link state and distance vector information link state routing is more efficient than distance vector routing when constraints are placed on the paths offered to destinations which is the case for QoS routing offering paths with required delay bandwidth reliability cost or other parameters We present a new link state routing protocol for wired internetworks called ALP adaptive link state protocol In ALP a router sends updates to its neighbors regarding the links in its preferred paths to destinations Each router decides which links to report to its neighbors based on its local computation of preferred paths A router running ALP does not ask its neighbors to delete links instead a router simply updates its neighbors with the most recent information about those links it decides to take out of its preferred paths We introduce and analyze two routing algorithms for wireless networks the source tree adaptive routing STAR protocol and the neighborhood aware source routing NSR protocol STAR is the first example of a table driven routing protocol that is more efficient than prior table driven and on demand routing protocols by exploiting link state information to allow paths taken to destinations to deviate from the optimum in order to save bandwidth without creating loops NSR is an on demand routing protocol based on partial topology information and source routing STAR is shown to be more efficient than the dynamic source routing DSR protocol in small ad hoc networks and NSR is shown to outperform STAR and DSR in large wireless networks with mobile nodes
