**Systems Analysis and Systems Engineering in Environmental Remediation Programs at the Department of Energy Hanford Site** National Research Council, Division on Earth and Life Studies, Commission on Geosciences, Environment and Resources, Committee on Remediation of Buried and Tank Wastes, 1998-08-21 The primary purpose of systems engineering is to organize information and knowledge to assist those who manage direct and control the planning development production and operation of the systems necessary to accomplish a given mission However this purpose can be

compromised or defeated if information production and organization becomes an end unto itself Systems engineering was developed to help resolve the engineering problems that are encountered when attempting to develop and implement large and complex engineering projects It depends upon integrated program planning and development disciplined and consistent allocation and control of design and development requirements and functions and systems analysis The key thesis of this report is that proper application of systems analysis and systems engineering will improve the management of tank wastes at the Hanford Site significantly thereby leading to reduced life cycle costs for remediation and more effective risk reduction The committee recognizes that evidence for cost savings from application of systems engineering has not been demonstrated yet
