### **Broadband Seafloor Sediment Acoustic Property and Multi-Parameter Geoacoustic Model**

Guangming Kan,Xingsen Guo,Jingqiang Wang,Baohua Liu,2025-05-13 The seafloor is an important boundary of the ocean sound field and the acoustic property of seafloor sediment and its spatial distribution are important factors that affect the propagation and variation of sound waves in the ocean The research of seafloor sediment acoustic property geoacoustic property is an interdisciplinary subject involving marine geology marine geophysics and marine acoustics The research of geoacoustic property mainly includes measurement techniques on geoacoustic property the impacting factors on the geoacoustic property the relationship between geoacoustic property and the physical mechanical parameters geoacoustic model application of geoacoustic property and so on The research of geoacoustics has important practical value and significance in many fields such as ocean sound field prediction marine engineering construction marine resources exploration marine disaster prevention etc There are many institutes and scientists to do research on seafloor sediment acoustics At present research on the acoustic property of seafloor sediments and geoacoustic models mainly focuses on high frequency and single parameter models while research on broadband geoacoustic property from low frequency to high frequency and multi parameter geoacoustic models are relatively lacking With the development of new technology such as in situ measurement at mid and low frequencies low frequency geoacoustic inversion and prediction methods based on artificial intelligence technologies such as machine learning and neural networks research on broadband geoacoustic property from low to high frequency and multi parameter geoacoustic models have received more attention
