hardware is capable of good performance once properly configured. Battery health below 80% indicates degradation contributing to drain though optimization still provides meaningful improvement. The guide includes decision frameworks helping determine when optimization alone suffices versus when battery replacement should be considered. I need all my apps and features I can't disable things. Optimization doesn't require disabling features you actually use. It involves disabling features and permissions you're not using or don't realize are enabled. Most users discover 10-15 apps with location access they don't remember granting background refresh for apps they haven't opened in months and notifications from apps they ignore. The guide emphasizes selective optimization: keep features providing value, disable features consuming battery without providing proportional benefit. Location access for Maps is appropriate; location access for shopping apps tracking you for advertising is not. You decide which trade offs align with your priorities. This probably requires technical expertise I don't have. Every procedure includes specific step by step instructions with exact Settings navigation paths.
