1. State what the lymphatic system is and its purpose.

Like the cardiovascular system, the lymphatic system consists of vessels and fluid and contains white blood cells (lymph). However, the fluid in the lymphatic system is called - leukocytes (not blood). Another difference is the presence of lymph nodes, which are small pea or bean-shaped structures that contain white blood cells. When we are sick, white blood cells accumulate in the lymph nodes, causing them to become swollen.

The lymphatic system "disinfects" excess fluid from the tissues before returning the fluid to the cardiovascular system via the right and left subclavian veins.
