The End of Doom Ronald Bailey, 2024-08-06 In the past five decades there have been many many forecasts of impending environmental doom They have universally been proven wrong Meanwhile those who have bet on human resourcefulness have almost always been correct In his widely praised book Ecoscam Ronald Bailey strongly countered environmentalist

alarmism using facts to demonstrate just how wildly overstated many claims of impending ecological doom really were. Now twenty years later the Reason Magazine science correspondent is back to assess the future of humanity and the global biosphere. Bailey finds contrary to popular belief that many present ecological trends are quite positive. Including Falling cancer incidence rates in the United States. The likelihood of a declining world population by mid century. The abundant return of agricultural land to nature as the world reaches peak farmland. A proven link between increases in national wealth and reductions in air and water pollution. Global warming is a problem but the cost of clean energy could soon fall below that of fossil fuels. In *The End of Doom* Bailey avoids polemics and offers a balanced fact based and ultimately hopeful perspective on our current environmental situation. Now isn't that a breath of fresh air?
