

CRITICAL CARE BUNDLE

ACUTE-ON-CHRONIC CARE

Acute-on-Chronic Care is a medical concept that refers to the care of patients who have a long-term condition that has become acute. This can happen for a variety of reasons, such as an infection, a change in medication, or a new diagnosis. The goal of acute-on-chronic care is to manage the acute episode while addressing the underlying chronic condition.

Key Features:

- Assessing the patient's overall health and functional status.
- Developing a care plan that addresses both the acute and chronic conditions.
- Managing medications and treatments for both conditions.
- Providing support for the patient and their family.

CRITICAL CARE

CRITICAL CARE is a medical specialty that deals with the care of patients who are severely ill or injured. These patients require intensive monitoring and treatment to prevent further complications and ensure their survival. Critical care units are typically found in hospitals and are staffed by a team of medical professionals, including intensivists, nurses, and respiratory therapists.

Key Features:

- Intensive monitoring of vital signs and oxygen saturation.
- Management of mechanical ventilation and other life support equipment.
- Treatment of specific conditions such as sepsis, acute respiratory distress syndrome (ARDS), and heart failure.
- Providing support for the patient and their family.

ICU

ICU stands for Intensive Care Unit. It is a specialized unit within a hospital that provides intensive medical care to patients who are critically ill or injured. The ICU is staffed by a team of medical professionals, including intensivists, nurses, and respiratory therapists. The goal of ICU care is to prevent further complications and ensure the patient's survival.

Key Features:

- Intensive monitoring of vital signs and oxygen saturation.
- Management of mechanical ventilation and other life support equipment.
- Treatment of specific conditions such as sepsis, acute respiratory distress syndrome (ARDS), and heart failure.
- Providing support for the patient and their family.

STROKE

STROKE is a medical emergency that occurs when the blood supply to a part of the brain is interrupted or reduced, causing damage to the brain tissue. There are two main types of stroke: **ischemic stroke** (caused by a blood clot) and **hemorrhagic stroke** (caused by a ruptured blood vessel). The symptoms of stroke can vary depending on the location and severity of the damage, but may include sudden numbness or weakness in the face, arm, or leg, difficulty speaking or understanding language, difficulty seeing, and difficulty walking or balance.

Key Features:

- Assessing the patient's symptoms and medical history.
- Performing a physical examination and diagnostic tests.
- Developing a care plan to manage the stroke and prevent further complications.
- Providing support for the patient and their family.

STROKE

Study Guide For Critical Care:

Critical Care Study Guide Gerard J. Criner, Rodger E. Barnette, Gilbert E. D'Alonzo, 2010-06-27 Critical care medicine is a dynamic and exciting arena where complex pathophysiologic states require extensive knowledge and up to date clinical information. An extensive knowledge of basic pathophysiology as well as awareness of the appropriate diagnostic tests and treatments that are used to optimize care in the critically ill is essential. Since our first edition 7 years ago new information crucial to the care and understanding of the critically ill patient has rapidly accumulated. Because this knowledge base crosses many different disciplines a comprehensive multidisciplinary approach presenting the information is essential. Similar to the multidisciplinary approach that is used to care for the critically ill patient we have strived to provide this content in an easily digestible format that uses a variety of teaching tools to facilitate understanding of the presented concepts and to enhance information retention. To meet the demand to provide comprehensive and diverse education in order to understand the pathogenesis and optimum care of a variety of critical illnesses we have substantially revised the prior topics in the first edition with updated information. We have also markedly expanded the number of topics covered to include acute lung injury and the acute respiratory distress syndrome an expanded discussion of the physiology and operation of mechanical ventilation, obstetrical care in the ICU, neurosurgical emergencies, acute coronary syndromes, cardiac arrhythmias, role of whole body rehabilitation in the ICU, ethical conduct of human research in the ICU and nursing care of the ICU patient.

Pediatric Critical Care Study Guide Steven E. Lucking, Frank A. Maffei, Robert F. Tamburro, Neal J. Thomas, 2012-04-10 This is the first comprehensive study guide covering all aspects of pediatric critical care medicine. It fills a void that exists in learning resources currently available to pediatric critical care practitioners. The major textbooks are excellent references but do not allow concise reading on specific topics and are not intended to act as both text and study guide. There are also several handbooks available but these are usually written for general pediatric residents and lack the advanced physiology and pathophysiology required for the higher level pediatric critical care practitioner.
