Chmielewski, Ryszard Kozera, Bok-Suk Shin, Konrad Wojciechowski, 2014-09-02 This book constitutes the refereed proceedings of the International Conference on Computer Vision and Graphics ICCVG 2014 held in Warsaw Poland in September 2014 The 81 full papers presented were carefully reviewed and selected from various submissions They cover various important aspects of computer vision and graphics

Scaling Up Machine Learning Ron Bekkerman, Mikhail Bilenko, John Langford, 2012 This integrated collection covers a range of parallelization platforms concurrent programming frameworks and machine learning settings with case studies

Electronic Structure Calculations on Graphics Processing

Units Ross C. Walker, Andreas W. Goetz, 2016-02-16 *Electronic Structure Calculations on Graphics Processing Units From Quantum Chemistry to Condensed Matter Physics* provides an overview of computing on graphics processing units GPUs a brief introduction to GPU programming and the latest examples of code developments and applications for the most widely used electronic structure methods The book covers all commonly used basis sets including localized Gaussian and Slater type basis functions plane waves wavelets and real space grid based approaches The chapters expose details on the calculation of two electron integrals exchange correlation quadrature Fock matrix formation solution of the self consistent field equations calculation of nuclear gradients to obtain forces and methods to treat excited states within DFT Other chapters focus on semiempirical and correlated wave function methods including density fitted second order Møller Plesset perturbation theory and both iterative and perturbative single and multireference coupled cluster methods *Electronic Structure Calculations on Graphics Processing Units From Quantum Chemistry to Condensed Matter Physics* presents an accessible overview of the field for graduate students and senior researchers of theoretical and computational chemistry condensed matter physics and materials science as well as software developers looking for an entry point into the realm of GPU and hybrid GPU CPU programming for electronic structure calculations

Repetitive Structures in Biological Sequences: Algorithms and Applications Marco Pellegrini, Alberto Magi, Costas S. Iliopoulos, 2016-10-27 Repetitive structures in biological sequences are emerging as an active focus of research and the unifying concept of repeatome the ensemble of knowledge associated with repeating structures in genomic proteomic sequences has been recently proposed in order to highlight several converging trends One main trend is the ongoing discovery that genomic repetitions are linked to many biological significant events and functions Diseases e g Huntington's disease have been causally linked with abnormal expansion of certain repeating sequences in the human genome Deletions or multiple copy duplications of genes Copy Number Variations are important in the aetiology of cancer Alzheimer and Parkinson diseases A second converging trend has been the emergence of many different models and algorithms for detecting non obvious repeating patterns in strings with applications to in genomic data Borrowing methodologies from combinatorial pattern matching string algorithms data structures data mining and machine learning these new approaches break the limitations of the current approaches and offer a new way to design better trans disciplinary research The articles collected in this book provides a glance into the rich emerging area of repeatome research addressing some of its pressing challenges We believe that these contributions are valuable resources for repeatome research and will stimulate further research from bioinformatic statistical and biological points of view
