Hoffman,2000-12-14      Lecture Notes on Complex Analysis Ivan Francis Wilde,2006 This book is based on lectures presented over many years to second and third year mathematics students in the Mathematics Departments at Bedford College London and King s College London as part of the BSc and MSci program Its aim is to provide a gentle yet rigorous first course on complex analysis Metric space aspects of the complex plane are discussed in detail making this text an excellent introduction to metric space theory The complex exponential and trigonometric functions are defined from first principles and great care is taken to derive their familiar properties In particular the appearance of in this context is carefully explained The central results of the subject such as Cauchy s Theorem and its immediate corollaries as well as the theory of singularities and the Residue Theorem are carefully treated while avoiding overly complicated generality Throughout the theory is illustrated by examples A number of relevant results from real analysis are collected complete with proofs in an appendix The approach in this book attempts to soften the impact for the student who may feel less than completely comfortable with the logical but often overly concise presentation of mathematical analysis elsewhere      **Basic Complex Analysis** Jerrold E.
