Animals have other abilities like knifelike claws and powerful muscles. But our brain has let us create a system for verbal communication, science, electronics, and intimate public arrangement. Each generation has done better and progressed farther than the previous generation. We have the dominance because we can build the things we could build. A superintelligence that could safeguard human values. But we'd only get one chance because if the superintelligence became unfriendly, getting rid of it or changing it would be next to impossible. It seems possible that sometime soon there could be an artificial intelligence advancement. And a couple chapters of this book are devoted to possible pathways to that. But the majority of the book is devoted to what happens next. The powers of the superintelligence, the decisive choices available. Then how do we mold the conditions to get a survivable and favorable outcome? Towards the end, we look at the big picture and how to avoid catastrophe. There may be things in this book Bostrom fails to take into account, and he may draw some wrong
