Gender Perspectives on Industry 4.0 and the Impact of Technology on Mainstreaming Female Employment Bala,

Shashi, Singhal, Puja, 2022-01-07 Almost all economies have or are at least starting to understand the significance of examining and mainstreaming gender issues in the world of work. Sociocultural evolution and various other factors have helped these developments but there is still so much more work to be done. Technology has played a substantial role in decreasing the gender divide as more households than ever before have access to technology and the revolution of access to information across most societies has become gender neutral and empowering. While technology can hold the potential to significantly expand the job market and open opportunities for all job seekers, questions surrounding automation and availability of jobs and the accessibility to secure the necessary qualifications and education needed to fill paid jobs rage on especially when examining those who are typically marginalized. *Gender Perspectives on Industry 4.0 and the Impact of Technology on Mainstreaming Female Employment* discusses gender perspective and its impact on the fourth industrial revolution particularly in the realm of employment structure and analyzes the impact of technology on mainstreaming women in paid employment. In the present environment, organizations are beginning to realize the importance of looking more critically at their workforce and structure and how to better cater to the diversity, equity, and inclusion movement while also productively managing the advancement of new technologies. Covering topics such as sustainable development and the future of work, it is ideal for policymakers, practitioners, professionals, consultants, managers, researchers, academicians, educators, and students.
