

Biology 1102
Reproduction + Development Practice

1. Define hermaphrodite - **an organism that produces both eggs and sperm; most require cross fertilization**
2. Hydra are small aquatic animals that produce offspring by forming an outgrowth which splits off from the parent into a new individual. This process of reproduction is called **budding**.
3. **True** or False: Some animals can reproduce both sexually and asexually.

4. Discuss the differences between asexual and sexual reproduction.

Asexual reproduction has a single parent and all of the offspring are genetically identical clones. Sexual reproduction has two parents. Each parent donates 1/2 of the genetic information to the offspring which are all genetically unique and diverse.

5. Vasectomies and tubal ligations are common and effective forms of birth control. Explain how they are performed.

A vasectomy cuts the vas deferens which is the passageway for the sperm from the testes to the urethra.

A tubal ligation cuts the oviduct which is the passageway for the sperm to reach the egg near the ovary.

6. Describe external fertilization and cite an animal which carries out external fertilization.

In external fertilization the sperm and eggs are both released from the body into surrounding water. Fertilization of the egg by the sperm occurs outside of the body. Frogs carry out external fertilization.

7. Write the following in sequence. Use #1 as the first stage and #5 as the last.

3 solid ball of cells; **4** blastocyst; **2** zygote; **5** embryo; **1** egg

8. During gastrulation three primary tissue layers form. State the name of one of the three and give an example of an organ system that it will give rise to.

<u>ectoderm</u>	- skin and nervous system
<u>mesoderm</u>	- skeletal + muscular systems
<u>endoderm</u>	- digestive system
