Unified Design Of Steel Structures:

Unified Design of Steel Structures Louis F. Geschwindner, 2011-12-20 Geschwindner's 2nd edition of Unified Design of Steel Structures provides an understanding that structural analysis and design are two integrated processes as well as the necessary skills and knowledge in investigating designing and detailing steel structures utilizing the latest design methods according to the AISC Code. The goal is to prepare readers to work in design offices as designers and in the field as inspectors. This new edition is compatible with the 2011 AISC code as well as marginal references to the AISC manual for design examples and illustrations which was seen as a real advantage by the survey respondents. Furthermore, new sections have been added on Direct Analysis Torsional and flexural torsional buckling of columns, Filled HSS columns and Composite column interaction. More real world examples are included in addition to new use of three dimensional illustrations in the book and in the image gallery, an increased number of homework problems and media approach. Unified Design of Steel Structures Louis F. Geschwindner, Judy Liu, Charles J. Carter, 2017 Unified Design of Steel Structures 3rd edition continues the unified LRFD and ASD approach to teaching structural steel design established in the first two editions. It addresses the design of steel structures for buildings as governed by the ANSI AISC 360-16 Specification for Structural Steel Buildings published by the American Institute of Steel Construction (AISC). It is intended primarily as a text for a first course in steel design for civil and architectural engineers. Such a course usually occurs in the third or fourth year of an engineering program. The book can also be used in a second building oriented course in steel design depending on the coverage in the first course. In addition to its use as a textbook, it provides a good review for practicing engineers looking to learn the provisions of the latest specification or to convert their practice from any of the old specifications to the new specification. Users are expected to have a firm knowledge of statics and strength of materials and have easy access to the AISC Steel Construction Manual 15th Edition. All examples that rely on LRFD and ASD provisions are fully presented even if it means some duplication so that regardless of approach being taught there will be no need to refer to the other approach. example. All homework problems that could be LRFD or ASD are presented both ways so that the instructor may choose the approach they want the student to follow. Subjects addressed include principles of limit states design, load factors, resistance factors and safety factors, tension member design, column or compression member design, beam or bending member design, plate girder design, design of beam columns or members subjected to combined axial load and bending, bracing member design, composite member design, connection basics including bolts, welds and connecting elements, design of shear connections, light bracing connections and direct bearing connections, design of moment connections and basics of seismic design. Unified Design of Steel Structures 3rd edition also features multi chapter problems and a new Integrated Design Project. Instructors can add a few selected problems throughout the term or include a full project design of a four story office building. Either way, all of the tools are here to help students learn how to apply the AISC Specification to the design of a
