Guided learning hours: **60**

● Aim and purpose

The aim of this unit is to ensure learners know the impact HCI has on society, economy and culture and provide the basic skills and understanding required to enable learners to design and implement human computer interfaces.

● Unit introduction

Human Computer Interaction (HCI) deals with the way people use technology. How do we give information to and receive information from computers and other digital devices? One of the biggest changes in the last 20 years has been the introduction of the graphical user interface and in many respects this has revolutionised the ways in which we interact with computers.

HCI is not confined to PCs. Consider a mobile phone or self-scan supermarket checkouts. These have carefully designed user interfaces to make them easier and faster to use. There are a number of broad definitions of HCI and these confirm that HCI is not confined to technical computing, and that the subject crosses many boundaries. It could be included in the study of philosophy, engineering, psychology, physiology, behaviour and many other areas.

The first part of this unit explores the impact of HCI on society, the economy and culture and looks at how HCI has developed and where it might be going next.

The fundamental principles involved in designing user interfaces are discussed with particular emphasis on perception, behaviour models and information processing. Specialist needs and the adaptation of interfaces to meet these varied needs will be examined.

The final part of the unit combines elements of HCI theory with learner's practical skills to enable learners to design and implement user interfaces for input and output, using a programming language of choice. Learners will evaluate interfaces and measure their effectiveness both quantitatively and qualitatively.

This unit could be combined with other units involving software development.

● Learning outcomes

On completion of this unit a learner should:

- 1 Know the impact of HCI on society, the economy and culture
- 2 Understand the fundamental principles of interface design
- 3 Be able to design and implement user interfaces.

Building Mobile Experiences Frank Bentley, Edward Barrett, 2012-09-14 Methods for new mobile experiences from concept creation to prototyping to commercialization The mobile device is changing the ways we interact with each other and with the world The mobile experience is distinct from the desktop or laptop experience mobile apps require a significantly different design philosophy as well as design methods that reflect the unique experience of computing in the world This book

presents an approach to designing mobile media that takes advantage of the Internet connected context aware and media sharing capabilities of mobile devices It introduces tools that can be used at every stage of building a mobile application from concept creation to commercialization as well as real world examples from industry and academia The methods outlined apply user centered design processes to mobile devices in a way that makes these methods relevant to the mobile experience which involves the use of systems in the complex spatial and social world rather than at a desk The book shows how each project begins with generative research into the practices and desires of a diverse set of potential users which grounds research and design in the real world It then describes methods for rapid prototyping usability evaluation field testing and scaling up solutions in order to bring a product to market Building Mobile Experiences grew out of an MIT course in communicating with mobile technology it is appropriate for classroom use and as a reference for mobile app designers
