Unit Operations of Particulate Solids Enrique Ortega-Rivas, 2016-04-19 Suitable for practicing engineers and engineers in training this book covers the most important operations involving particulate solids Through clear explanations of theoretical principles and practical laboratory exercises the text provides an understanding of the behavior of powders and pulverized systems It also helps readers develop skills for operating optimizing and innovating particle processing technologies and machinery in order to carry out industrial operations The author explores common bulk solids processing operations including milling agglomeration fluidization mixing and solid fluid separation

Unit Operations of Particulate Solids Allison Shatkin, 2011 Suitable for practicing engineers and engineers in training Unit Operations of Particulate Solids Theory and Practice presents the unit operations in chemical engineering that involve the handling and processing of particulate solids The first part of the book analyzes primary and secondary properties of particles and particulate systems focusing on their characterization and the effects on selection and design of silos and conveyors Covering the main industrial operations of dry solids processing the second part offers insight into the operation principles of the most important technologies that handle dry solids in bulk With an emphasis on two phase and multiphase flow the final part describes all of the relevant systems in industrial processes that combine two different components of the state of matter as well as technologies for separating phases by purely mechanical means Through clear explanations of theoretical principles and practical laboratory exercises this book provides an understanding of the behavior of powders and pulverized systems It also helps readers develop skills for operating optimizing and innovating particle processing technologies and machinery in order to carry out industrial operations such as centrifugation filtration and membrane separations

Guide for Aquaculture Seawater Systems John E. Huguenin,John Colt,1989 The primary objective of this book is to provide basic information and considerations needed for the design construction and operation of seawater systems for culturing purposes The seawater flow rate range of 10 1000 gallons approximately 40 4000 liters per minute has been chosen because it includes the vast majority of such systems currently in use While the objectives of these systems vary widely they all depend on a common technological and biological data base Since the seawater system is usually only a means to an end most potential users have little prior practical experience or technical knowledge in this area Practical information on seawater systems for culturing purposes tends to be fragmented and not readily available in usable form Most conventional engineering experience is with marine systems which are orders of magnitude larger This technology is often not readily scaled down or directly useable and more than likely prohibitively expensive The subject of this book crosses many different disciplines interests and backgrounds This can cause considerable confusion with definitions and units of measure *Chemical Engineering* ,1984 The Theory and Practice of Industrial Pharmacy Leon Lachman,Herbert A.
