**Intelligence on the Required Skills in the Labor Market** Marina Laukes,2024-03-18 Bachelor Thesis from the year 2024 in the subject Economics Job market economics grade 1 0 Ingolstadt University of Applied Sciences language English abstract The impact of technology on employment and consequently on skills is becoming increasingly apparent particularly in the use of artificial intelligence The aim of this bachelor thesis can therefore be divided into two research questions On the one hand the aim is to analyze what impact the use of artificial intelligence will have on the labor market The second question is concerned with the impact artificial intelligence will have on the labor market in terms of the skills required In order to provide a profound answer to the research questions a wide range of literature was used including books research studies and use cases Based on the research questions the thesis addresses the worldwide AI driven labor market identifying

both the displacement of human workers and the simultaneous opportunities for new occupations and economic growth. Moreover, a variety of necessary skills are highlighted that are essential for overcoming the dynamic challenges on the labor market posed by AI. Finally, the subsequent analysis of the financial sector and public administration serves to illustrate and clarify the relevance of these skills. Therefore, both knowledge of artificial intelligence and existing human skills are important. Depending on the occupation and task area, the focus of skills is either on the direct application of artificial intelligence or on developing an awareness and understanding of it. It also shows that a wide range of actors, including companies and educational institutions, have a key role to play in the process of adapting workers' skills.

*Artificial Intelligence in Recruiting. A Literature Review on Artificial Intelligence Technologies, Ethical Implications and the Resulting Chances and Risks* Matthias Rudolph, 2021-01-07 Master's Thesis from the year 2020 in the subject Computer Sciences Artificial Intelligence grade 1.3 Friedrich Alexander University Erlangen Nuremberg Wirtschaftsinformatik language English abstract

The thesis aims to analyze this field of tension between the benefits and risks caused by the introduction of AI into recruiting based on a systematic analysis of academic publications. To the knowledge of the author, neither a literature review on ethical challenges of AI-based recruiting tools nor an overview addressing application fields and the resulting ethical risks has been published so far. Consequently, this thesis aims to close this research gap by disclosing how AI technologies affect the recruiting process and how ethical challenges arising from the implementation of AI-based tools are addressed in the same publications. Consequently, research question RQ one RQ1 and RQ two RQ2 can be derived: Which AI technologies are applied in the field of recruiting and how do they influence the recruiting process? Which major ethical challenges arise from the introduction of AI into recruiting and how are these challenges addressed by the proposed AI-based tools? Addressing these two RQs, the remainder of this thesis is structured as follows: Chapter 2 classifies recruiting and its subprocesses as a part of Human Resources (HR) and establishes a common understanding of AI and machine learning (ML) algorithms relevant in AI-based recruiting tools and derives major ethical challenges with a focus on the ethical principles fairness and transparency. In chapter 3, the methodical approach used for identifying and selecting relevant literature is described. Chapter 4 answers both RQs based on the AI-based recruiting tools included in the literature set. In turn, the first part of the analysis focuses on analyzing how the needs raised through traditional recruiting means are addressed by AI-based recruiting tools, also touching base on the underlying technologies. The second part addresses if and where applicable how these publications incorporate fairness and transparency. Subsequently, chapter 5 discusses the main findings of the analysis of the literature set and provides implications for theory and practice followed by a brief conclusion and the outlining of limitations and future research fields in chapter 6.

*Factors Influencing Customer Satisfaction. Differences Between E-Commerce and Voice Commerce*

Daniel Kraus, 2019-06-18 Master's Thesis from the year 2018 in the subject Business economics Trade and Distribution grade 1.3 German Graduate School of Management and Law gGmbH language English abstract This thesis comparatively investigates factors for customers' satisfaction in voice commerce and e-commerce to assess the emphasis customers place on factors in both channels. Voice commerce is a newly evolving electronic commerce channel where customers communicate with dedicated systems on smart speakers, mobile phones or other devices using their voice in order to find and order products. This thesis identifies customer satisfaction predictors that potentially differ between both channels: convenience and transaction process efficiency are based on previous research on chatbot and digital assistant expectations. In the area of recommendations, recommendation personalization: the degree of personalization of product recommendations is identified from previous research. The construct of recommendation complexity has been created, which is the degree of detail and amount of information recommendations are presented. Differences in this domain of computer-human interaction are explained by media richness theory, an application of neuro-ergonomics. Data was collected through a survey conducted on the crowdsourcing platform Amazon MTurk. The sample consisted of 178 US consumers that had purchased goods using both e-commerce and voice commerce. Structural equation modeling (SEM) was used as well as multiple regression analysis for statistical hypotheses testing. Two SEM models were created for each voice commerce and e-commerce, and both models were compared to investigate comparative hypotheses. This research enables product managers to recognize which factors of customers' satisfaction differ from those in e-commerce. While developing their voice commerce strategy and system design, managers should emphasize convenience factors such as ease of use and ease of understanding as well as an efficient transaction process.
