Recently we have witnessed enormous advances in veterinary medicine fuelled mainly by the increased owner spending on pets which more than doubled in the last decade in the USA. Thus companion animal medicine is individualized often resembling the medical situation in humans which is grounded on state of the art knowledge and infrastructure. A significant proportion of these recent advances are due to integrating novel technology into veterinary clinics and homes. Although the veterinary approach in farmed animals is primarily preventive and focuses on the whole herd technical solutions are equally crucial for successful livestock management. Human medicine is based on state of the art technology. Some recent advances translated into practice are mRNA technology, telemedicine, health wearables and artificial intelligence in diagnostics, imaging and drug discovery. Compared to humans research focusing on technology in veterinary medicine is scarce and carried out by individuals rather than large research groups. With this special issue we aim to promote research on various technologies in veterinary medicine. The recent technological advances improving animal health and well-being should be encouraged and disseminated. Moreover we hope to connect various researchers with the same objectives which could lead to potential joint ventures resulting in higher excellence and impact. *The NIH Catalyst*, 2008 Applied Radiology, 2008 Each issue includes separate but continuously paged sections called Nuclear medicine and Ultrasound.
