**Understanding Human Anatomy and Pathology** Rui Diogo,Drew M. Noden,Christopher M. Smith,Julia Molnar,Julia C. Boughner,Claudia Alexandra Amorim Barrocas,Joana Araujo Bruno,2018-09-03 Understanding Human Anatomy and Pathology An Evolutionary and Developmental Guide for Medical Students provides medical students with a much easier and more comprehensive way to learn and understand human gross anatomy by combining state of the art knowledge about human anatomy evolution development and pathology in one book The book adds evolutionary pathological and developmental information in a way that reduces the difficulty and total time spent learning gross anatomy by making learning more logical and systematic It also synthesizes data that would normally be available for students only by consulting

several books at a time Anatomical illustrations are carefully selected to follow the style of those seen in human anatomical atlases but are simpler in their overall configuration making them easier to understand without overwhelming students with visual information The book s organization is also more versatile than most human anatomy texts so that students can refer to different sections according to their own learning styles Because it is relatively short in length and easily transportable students can take this invaluable book anywhere and use it to understand most of the structures they need to learn for any gross anatomy course

The Dynamic Human Maciej Henneberg,Arthur Saniotis,2016-03-24 The natural world can be viewed as a continuously changing complex system comprising variable units that do not conform to any stable plan Within this framework human evolution is not the story of

the past that created Homo sapiens and then handed this account over to written history It is the ongoing process that shapes us now and will shape us in the future body and mind We must understand it in order to survive and be able to direct it to our advantage The Dynamic Human presents a general theory of how humans function as a multi individual system embedded in the natural world The authors employ a unified approach of systems theory to outline forces that direct ongoing human evolution and produce its outcomes in terms of the past present and future Readers will find a perspective on the human place in nature through a brief account of the past human evolution over 10 million years ago a discussion of the earliest appearance of humans some 2 million years ago and a description of the mechanisms of the changes in the gene pool of humans from generation to generation Understanding the forces involved in these mechanisms physical and mental growth and development may allow us to understand world better The Dynamic Human presents a simplified perspective on human evolution for all readers interested in a discourse on the origins nature and future of human beings

*How Children Invented Humanity* David F. Bjorklund, 2020-10-30 Infants and children are the often ignored heroes when it comes to understanding human evolution Evolutionary pressures acted upon the young of our ancestors more powerfully than on adults and changes over the course of development in our ancestors were primarily responsible for the species and the people we have become This book takes an evolutionary developmental perspective emphasizing that developmental plasticity the ability to change our physical and psychological selves early in life is the creative force in evolution with natural selection serving as a filter eliminating novel developmental outcomes that did not benefit survival This book is about becoming of becoming human and of becoming mature adults Bjorklund asks How can an understanding of human development help us better understand human evolution Then turning the relation between evolution and development on its head Bjorklund demonstrates how an understanding of our species evolution can help us better understand current development and how to better rear successful and emotionally healthy children

*Understanding Climate's Influence on Human Evolution* National Research Council, Division on Earth and Life Studies, Board on Earth Sciences and Resources, Committee on the Earth System Context for Hominin Evolution, 2010-03-17 The hominin fossil record documents a history of critical evolutionary events that have ultimately

shaped and defined what it means to be human including the origins of bipedalism the emergence of our genus Homo the first use of stone tools increases in brain size and the emergence of Homo sapiens tools and culture The Earth's geological record suggests that some evolutionary events were coincident with substantial changes in African and Eurasian climate raising the possibility that critical junctures in human evolution and behavioral development may have been affected by the environmental characteristics of the areas where hominins evolved Understanding Climate's Change on Human Evolution explores the opportunities of using scientific research to improve our understanding of how climate may have helped shape our species Improved climate records for specific regions will be required before it is possible to evaluate how critical resources for hominins especially water and vegetation would have been distributed on the landscape during key intervals of hominin history Existing records contain substantial temporal gaps The book's initiatives are presented in two major research themes first determining the impacts of climate change and climate variability on human evolution and dispersal and second integrating climate modeling environmental records and biotic responses Understanding Climate's Change on Human Evolution suggests a new scientific program for international climate and human evolution studies that involve an exploration initiative to locate new fossil sites and to broaden the geographic and temporal sampling of the fossil and archeological record a comprehensive and integrative scientific drilling program in lakes lake bed outcrops and ocean basins surrounding the regions where hominins evolved and a major investment in climate modeling experiments for key time intervals and regions that are critical to understanding human evolution
