A shift in orientation toward more use of software packages specifically MATLAB and Excel with VBA. This includes material on developing MATLAB m files and VBA macros. In addition, the text has been updated to reflect improvements in MATLAB and Excel since the last edition. Also, many more and more challenging problems are included. The expanded breadth of engineering disciplines covered is especially evident in the problems which now cover such areas as biotechnology and biomedical engineering. Features: The new edition retains the clear explanations and elegantly rendered examples that the book is known for. There are approximately 150 new challenging problems drawn from all engineering disciplines. There are completely new sections on a number of topics including multiple integrals and the modified false position method. The website will provide additional materials such as programs for student and faculty use and will allow users to communicate directly with the authors.

*Numerical Methods for Engineers* Santosh K. Gupta, 1995. This book is intended to be a text for either a first or a second course in numerical methods for students in all engineering disciplines. Difficult concepts which usually pose problems to students are explained in detail and illustrated with solved examples. Enough elementary material that could be covered in the first level course is included for example methods for solving linear and nonlinear algebraic equations, interpolation, differentiation, integration, and simple techniques for integrating Odes and Pdes. Ordinary and partial differential equations, advanced techniques and concepts that could form part of a second level course include: Gears method for solving ODE IVPs, initial value problems, stiffness of ODE IVPs, multiplicity of solutions, convergence characteristics, the orthogonal collocation method for solving ODE BVPs, boundary value problems, and finite element techniques. An extensive set of graded problems often with hints has been included. Some involve simple applications of the concepts and can be solved using a calculator while several are from real life situations and require writing computer programs or use of library subroutines. Practice on these is expected to build up the reader's confidence in developing large computer codes.
