Solution of Partial Differential Equations on Vector and Parallel Computers James M. Ortega, Robert G. Voigt, 1985-01-01 This volume reviews in the context of partial differential equations algorithm development that has been specifically aimed at computers that exhibit some form of parallelism Emphasis is on the solution of PDEs because these are typically the problems that generate high computational demands The authors discuss architectural features of these computers insofar as they influence algorithm performance and provide insight into algorithm characteristics that allow effective use of hardware

Differential Equations and Boundary Value Problems Charles Henry Edwards, David Penney, David Calvis, 2022-11-20 For 1 semester sophomore or junior level Differential Equations courses Balances concepts visualization and applications Differential Equations and Boundary Value Problems fosters the conceptual development and geometric visualization essential to science and engineering students Manual methods complement the computer based methods that illuminate qualitative phenomena opening up a wider range of more realistic applications One text now meets all course needs Courses not covering boundary value problems can use the 6th Edition with no added cost for that material This revision also adds and updates content throughout including an expanded Application Module that discusses COVID 19 Hallmark features of this title Emphasis on numerical methods includes early introduction of numerical solution techniques mathematical modeling stability and qualitative properties of differential equations with generic numerical algorithms that can be implemented in various technologies Application Modules follow key sections most with computing projects that reinforce the corresponding text sections Approximately 2000 problems range from computational to applied and conceptual problems An expansive answer section includes answers to most odd and even numbered problems Emphasis on technology and ODEs explores newer methods of computing differential equations covering the software systems tailored specifically to differential equations as well as Maple Mathematica and MATLAB New and updated features of this title New content includes a new application of differential equations to the life sciences in Application Module 6 4 The Rayleigh van der Pol and FitzHugh Nagumo Equations The SIR Model and COVID 19 Characterized by the same careful and thorough exposition found throughout the text this new unit gives students yet another perspective about differential equations Extensively revised design New use of full color enhances graphs and figures so that students can more easily discern different solutions in the figures Added marginal notes aid in understanding the mathematics in the text easier identification of application topics in the exercise set includes new run in problem titles new Your Turn headers in the Application Modules now clarify where the exposition ends and the students investigations begin 16 new Interactive Figures illustrate how interactive computer applications with slider bars or touchpad controls can be used to change initial values or parameters in a differential equation allowing students to immediately see in real time the resulting changes in the structure

of its solutions Using a mouse or touchpad the initial point for an initial value problem can be dragged to a new location and the corresponding solution curve is automatically redrawn and dragged along with its initial point For examples see Figures 1 3 5 and 3 2 4 Features of MyLab Math for the 6th Edition Additional Exercises with immediate feedback Over 1000 assignable exercises are based on the textbook exercises and regenerate algorithmically to give students unlimited opportunity for practice and mastery MyLab Math provides helpful feedback when students enter incorrect answers and includes optional learning aids including Help Me Solve This View an Example videos and an eText New Set up Solve Exercises require students to describe how they will set up and approach the problem This reinforces conceptual understanding of the process applied in approaching the problem promotes long term retention of the skill and mirrors what students will be expected to do on a test Instructional videos provide meaningful support as a learning aid within exercises alongside key examples in the eText or for self study within the Video Resource Library Instructors can assign videos within MyLab homework use videos in class or offer as a supplementary resource on specific topics Early Alerts are now included with Performance Analytics and use predictive analytics to identify struggling students even if their assignment scores are not a cause for concern In both Performance Analytics and Early Alerts instructors can email students individually or by group to provide feedback Learn more about MyLab Math
