**Public Program Evaluation** Laura Langbein,2014-12-18 This readable and comprehensive text is designed to equip students and practitioners with the statistical skills needed to meet government standards regarding public program evaluation Even those with little statistical training will find the explanations clear with many illustrative examples case studies and applications Far more than a cookbook of statistical techniques the book begins with chapters on the overall context for successful program evaluations and carefully explains statistical methods and threats to internal and statistical validity that correspond to each evaluation design Laura Langbein then presents a variety of methods for program analysis and advise readers on how to select the mix of methods most appropriate for the issues they deal with always balancing methodology with the need for generality the size of the evaluator's budget the availability of data and the need for quick results

**Digest of Social Experiments** David H. Greenberg,Mark Shroder,1997 Social experimentation is the most powerful method available to isolate the impacts of social programs It involves the random assignment of the test groups to otherwise identical treatment and control sample groups so that any differences that emerge at the end of the experiment can be interpreted as results of the program It is the only social science measurement tool that resembles the methods used by the natural sciences This volume is the most comprehensive reference work to date on all known evaluations that have used or are using social experimentation to measure the impact of a social program The authors inventory 145 completed and 75 ongoing social experiments giving the cost time period treatments tested outcomes of interest sample sizes and target populations design issues and methodological limitations
