

## Quantum Physics Study Guide

This study guide provides a comprehensive overview of key concepts in introductory quantum physics. Use it to review material, prepare for exams, and deepen your understanding of this fascinating field.

### I. The Dawn of Quantum Mechanics: Limitations of Classical Physics

- **Blackbody Radiation:** Understand the problem classical physics faced in explaining the spectrum of light emitted by a blackbody. Know how Max Planck's hypothesis of quantized energy ( $\Delta E = h\nu$ ) resolved this issue.
- **The Photoelectric Effect:** Define the photoelectric effect (emission of electrons from a metal surface when light shines on it). Explain why classical wave theory failed to explain its key features (threshold frequency, instantaneous emission, kinetic energy dependence on frequency). Understand Einstein's explanation using photons (quanta of light) and the concept of work function.
- **Atomic Spectra:** Recall that atoms emit and absorb light at discrete wavelengths. Explain why classical physics could not account for these sharp spectral lines. Be familiar with the basic ideas of the Bohr model (quantized energy levels, electron transitions) and its successes and limitations.

**Key Terms:** Blackbody radiation, Planck's constant ( $h$ ), quantum, photon, photoelectric effect, work function ( $\phi$ ), threshold frequency ( $\nu_0$ ), stopping potential, atomic spectra, emission spectrum, absorption spectrum, Bohr model, quantized energy levels.

### II. Wave-Particle Duality

- **Light as Waves and Particles:** Understand the historical debate about the nature of light (wave vs. particle). Know about experiments demonstrating the wave nature (diffraction, interference - Young's double-slit) and the particle nature (photoelectric effect, Compton scattering).
