Ideas to Know:

- **Matter** is anything that takes up space and has mass.
- Three states of matter are **solids, liquids, and gases**.
- An object's **physical properties** include its size, shape, texture, smell, taste, and color.
- **Solids** have particles that are packed together firmly and connected. Solids **have a definite shape and volume**.
- **Liquids** have particles that **are loosely connected** and flow past one another. A liquid **does not have a definite shape**. It **takes the shape of its container**. Liquids **do have a definite volume**.
- Gas particles bounce off one another as they move freely. Gases have **no** definite shape or volume. A gas expands to fill all of the available space.
- The elements on a **periodic table** are **organized by their individual properties**.
- An **atom** is the smallest particle of an element that has properties of that element.
- Mass is the amount of matter an object has. **Mass is measured with a balance scale**. An object's mass **is the same EVERYWHERE**, but its weight **may be different**.
- If an object sinks in the water, it has little **buoyancy**. The object has more **density** than the water.
- A km (1,000 m) can be used to measure longer distances (from one place to another) —similar to a mile in customary units.
- Volume can be determined by measuring the amount of space an object occupies.
- **Volume can be measured using a graduated cylinder or measuring cup**. To find the volume of a box, you can see how many **cubes** of a certain **size** can fit inside the box.
- Scientists **measure an object's length** by using a ruler with centimeters (cm) or a meter (m) stick.
- Volume of a liquid is measured in milliliters (mL) or liters (L) by scientists.
- An object's **mass** is measured by using a balance scale. Scientists use grams (g) or kilograms (kg) when measuring mass.
- American scientists and doctors use the metric system instead of customary units because:
 - Scientists and doctors around the world use the metric system. This allows for a common language that everyone can understand
 - It is easier to use the metric system since the units are based on a system of 10 instead of random numbers like customary units.
