Modern Mathematical Statistics with Applications Jay L. Devore, Kenneth N. Berk, 2011-12-07 Modern Mathematical Statistics with Applications Second Edition strikes a balance between mathematical foundations and statistical practice In keeping with the recommendation that every math student should study statistics and probability with an emphasis on data analysis accomplished authors Jay Devore and Kenneth Berk make statistical concepts and methods clear and relevant through careful explanations and a broad range of applications involving real data The main focus of the book is on presenting and illustrating methods of inferential statistics that are useful in research It begins with a chapter on descriptive statistics that immediately exposes the reader to real data The next six chapters develop the probability material that bridges the gap between descriptive and inferential statistics Point estimation inferences based on statistical intervals and hypothesis testing are then introduced in the next three chapters The remainder of the book explores the use of this methodology in a variety of more complex settings This edition includes a plethora of new exercises a number of which are similar to what would be encountered on the actuarial exams that cover probability and statistics Representative applications include investigating whether the average tip percentage in a particular restaurant exceeds the standard 15% considering whether the flavor and aroma of Champagne are affected by bottle temperature or type of pour modeling the relationship between college graduation rate and average SAT score and assessing the likelihood of O ring failure in space shuttle launches as related to launch temperature

Probability and Statistics by Example: Volume 1, Basic Probability and Statistics Yu. M. Suhov, Mark Kelbert, 2005-10-13 Probability and Statistics are as much about intuition and problem solving as they are about theorem

proving Because of this students can find it very difficult to make a successful transition from lectures to examinations to practice since the problems involved can vary so much in nature Since the subject is critical in many modern applications such as mathematical finance quantitative management telecommunications signal processing bioinformatics as well as traditional ones such as insurance social science and engineering the authors have rectified deficiencies in traditional lecture based methods by collecting together a wealth of exercises for which they have supplied complete solutions These solutions are adapted to needs and skills of students To make it of broad value the authors supply basic mathematical facts as and when they are needed and have sprinkled some historical information throughout the text

High-Dimensional Regression Analysis and Artificial Intelligence Asaf Hagiye, Jiuping Xu, 2026-01-01 In this book a novel high dimensional linear and nonlinear regression model is introduced to address in part the challenges of evaluating the stability and confidence of large scale models interpretability The book begins by reviewing foundational concepts in regression analysis and discussing the current state and challenges of AI interpretability Through an in depth exploration of regression models the core principles of data driven linear regression are explained To enhance the explanatory power of regression models variable parameter regression models are further investigated and extended to variable parameter nonlinear regression

models To handle complex relationships the Gauss Newton iterative method is incorporated ensuring the stability of high dimensional nonlinear regression The Confidence Interval based Credibility Evaluation CICE framework combines statistical indicators such as interval width center deviation and accuracy into a single score to assess the stability and reliability of explanations validated through case studies in engineering finance and time series prediction Overall the book presents a coherent framework for interpretable AI integrating regression modeling confidence region construction and credibility evaluation to enhance interpretability and statistical accountability fostering more trustworthy AI systems Chapter 1 introduces the fundamental concepts and theoretical developments of both regression analysis and AI explainability highlighting their interconnections Chapter 2 reviews essential probability theory and mathematical statistics covering random variables measure spaces probability distributions parameter estimation including least squares and maximum likelihood methods and asymptotic theory which serve as the foundation for analyzing model consistency and convergence Chapter 3 focuses on the effects of correlated errors in linear regression establishing parameter convergence conditions to ensure the consistency and asymptotic normality of covariance estimators Chapter 4 introduces variable parameter regression models and systematically studies M estimators and generalized regression models within the framework of robust statistics By addressing non normal errors and outliers these methods improve model adaptability The chapter also establishes the robustness of the generalized regression model through theoretical analysis of covariance estimation Chapter 5 introduces the Confidence Interval based Credibility Evaluation CICE framework which integrates multiple statistical indicators into a unified score to assess the stability and reliability of model explanations Through real world case studies in engineering finance and time series prediction the effectiveness of CICE in detecting unstable interpretations and enhancing model transparency is demonstrated
