

MEASUREMENT & GEOMETRY

Area, Perimeter, and Volume

Perimeter

Perimeter is the path or distance around any plane figure.

It is a measure of length. We use units like centimeter, inch, and foot to measure perimeter.

Perimeter is used in many real-life situations where you need to measure the boundary or outline of a space. Here are some examples:

Measuring a border around the garden Measuring a yard Measuring a fence around the house

Finding Perimeter

Count the units around the outside of the figure.

Perimeter = 10 units

Add all the sides.

3 in.
 $3 + 3 + 3 = 9$
Perimeter = 9 in.

Area

Area is measure of space within a plane figure.

Area is measured by the number of square units needed to cover a surface or a plane figure.

Units are written as square units or unit^2 .

Area is used in many real-life situations where you need to measure the amount of space a surface covers. Here are some examples:

Measuring a wall Measuring a rug on the floor Measuring a garden

Count the number of square units inside a figure.

Area = 10 square units

Volume

Volume is the amount of space that a three-dimensional object occupies. It is a measurement of the physical space inside an object, and measured in cubic units.

Capacity, on the other hand, refers to the amount of material (like liquid, gas, or other substances) that a container can hold. Capacity is often measured in units like liters, milliliters, gallons, or quarts.

For example:

- A water bottle has a certain volume, which tells you how much liquid it can hold (capacity).
- A box has a volume that indicates how much stuff you can pack inside it (capacity).
- A swimming pool has a volume that shows how much water it can contain (capacity).

In all these cases, volume is the measure of the space inside the object, which directly relates to its capacity. So, **volume is a measure of capacity.**

Finding Volume

Count the total number of cubes.

$15 \times 15 = 30$
Volume = 30 cubic units

Multiply the length, width, and height.

$3 \times 3 \times 4 = 36$
Volume = 36 in^3

Volume is used in many real-life situations where you need to determine the amount of space inside an object. Here are some examples:

Measuring a box Measuring a bottle Measuring a container Measuring a room Measuring a garden

Area of a Right Triangle

A right triangle is a triangle with one right angle.

A right triangle has a base and a height that is used to determine the area of the triangle.

Finding Area of a Right Triangle

To find the area of a triangle, use the formula:

$$\frac{1}{2} \times b \times h$$

$$\begin{aligned} \frac{1}{2} \times 6 \times 7 \\ \frac{1}{2} \times 42 \\ \frac{42}{2} = 21 \text{ inches}^2 \end{aligned}$$
