

- 19 Push the connecting rod and piston assembly up the cylinder bore and withdraw from the top.
- 20 Remove the guide bolts.

Refitting

- 21 Locate the applicable crankshaft journal at B.D.C.
- 22 Place the bearing upper shell in the connecting rod.
- 23 Retain the upper shell by screwing the guide bolts 605351 on to the connecting rods.
- 24 Insert the connecting rod and piston assembly into its respective bore, noting that the domed shape boss on the connecting rod must face towards the front of the engine on the right-hand bank of cylinders and towards the rear on the left-hand bank. When both connecting rods are fitted, the bosses will face inwards towards each other.

- 25 Position the oil control piston rings so that the ring gaps are all at one side, between the gudgeon pin and piston thrust face. Space the gaps in the ring rails approximately 25 mm (1 in) each side of the expander ring joint.

- 26 Position the compression rings so that their gaps are on opposite sides of the piston between the gudgeon pin and piston thrust face.
- 27 Using a piston ring compressor, locate the piston into the cylinder bore.

- 28 Place the bearing lower shell in the connecting rod cap.
- 29 Locate the cap and shell on to the connecting rod, noting that the rib on the edge of the cap must be towards the front of the engine on the right-hand bank of cylinders and towards the rear on the left-hand bank.
- 30 Secure the connecting rod cap. Torque 54 Nm (40 lbf ft).
