**Mandala-365** Dr. M. P. Khan NMD, MD,2016-11-03 In a very real sense each of us is a mandala Some of us have intricate patterns and colors reflecting the complex experiences of our lives Some of us are simple arcs of existence with minimalist designs and subtle colors and every possible combination in between Each of us is as unique as our individual DNA which strangely in cross section on electron microscopy looks like a mandala But unlike our DNA our mandalas are constantly shifting shapes and colors as we make our choices as to the best way to live our lives All designs of the mandala have a borderthe interface we have with one another and the material world And each mandala has a center the singularity where the trinity of mind body and spirit integrates and unites with the divine self

**Environmental Policy is Social Policy - Social Policy is Environmental Policy** Isidor Wallmann,2014-07-08 This book argues that social and environmental policy should be synthetically treated as one and the same field that both are but two aspects of the same coin if sustainability is the goal Such a paradigm shift is indicated important and timely to effectively move towards sustainability This book is the first to take this approach and to give examples for it Not to synthetically merge the two fields has been and will continue to be highly insufficient inefficient and contradictory for policy and public administration aiming for a transformation towards a sustainable world In general social problems are dealt with in one policy corner and environmental problems in another Rarely is social policy at large concerned with its impact on the environment or its connection with and relevance to environmental policy Equally environmental problems are generally not seen in conjunction with social policy even though much environmental policy directly relates to health nutrition migration and other issues addressed by social policy This book intends to correct the pattern to separate these very significant and large policy fields Using examples from diverse academic and applied fields it is shown how environmental policy can and should be thought of as social policy and how social policy can and should simultaneously be seen as environmental policy Tremendous benefits are to be expected

**Making is Connecting** David Gauntlett,2013-04-29 In Making is Connecting David Gauntlett argues that through making things people engage with the world and create connections with each other Both online and offline we see that people want to make their mark on the world and to make connections During the previous century the production of culture became dominated by

professional elite producers But today a vast array of people are making and sharing their own ideas videos and other creative material online as well as engaging in real world crafts art projects and hands on experiences Gauntlett argues that we are seeing a shift from a sit back and be told culture to a making and doing culture People are rejecting traditional teaching and television and making their own learning and entertainment instead Drawing on evidence from psychology politics philosophy and economics he shows how this shift is necessary and essential for the happiness and survival of modern societies

O'Dwyer,2021-10-31 This open access edited volume critically examines a coherence building opportunity between Climate Change Adaptation the Sustainable Development Goals and Disaster Risk Reduction agendas through presenting best practice approaches and supporting Irish and international case studies The Covid 19 pandemic has highlighted existing global inequalities and demonstrated the scope and scale of cascading socio ecological impacts The impacts of climate change on our global communities will likely dwarf the disruption brought on by the pandemic and moreover these impacts will be more diffuse and pervasive over a longer timeframe This edited volume considers opportunities to address global challenges in the context of developing resilience as an integrated development continuum instead of through independent and siloed agendas

communication strategies about climate change Findings highlight complexities in local decision making and climate change as a low city priority but also suggest that resilience and sustainability may be useful for climate communication strategies and engagement Collaboration with the involved community partners will continue with additional research and engagement informed by these data The last study analyzes a survey experiment of U S adults that tests whether framing communication about local issues in terms of resilience and sustainability influence perceptions of local climate action Rather than these terms influencing attitudes findings showed that nuanced environmental attitudes and political ideology were drivers of perceptions about local action These findings raise questions as to how nuances in social identities may interact and influence perspectives of local government action on wicked issues that future mixed methods research will address Overall this research contributes to the evolving approaches of post normal science as highlighted by the practical theoretical and methodological implications that inform a science communication research agenda navigating wicked science issues in local contexts
