Reservoir Fisheries and Aquaculture Development for Resettlement in Indonesia Barry A. Costa-Pierce, Otto Soemarwoto, 1990-01-01 [FAO Circulaire Sur Les Pêches](#) ,1983 **Fish behaviour and welfare** Pablo Almazan Rueda, Rosario Martínez-Yáñez ,Ana C. Puella Cruz, 2024-09-19 Fish welfare is currently one of the most important concerns

in aquaculture and knowledge on how to improve fish welfare should be practical and implementable for all aquaculture farms. The objective of this Research Topic is to extend the current knowledge on fish welfare and to identify more comprehensive and practical indicators of the existing standard for fish welfare that are easily more comprehensive and practical indicators in order to make it easy to implement on fish farms. A secondary objective is to identify which welfare issues are most relevant. It is important to mention that good fish welfare cannot simply be extrapolated from terrestrial animals. It has to take into consideration that different species of fish must also be taken into consideration. Whether these are species of commercial interest or not, they have different behaviour and respond differently to stress and consequently require a species specific approach to improving their welfare. Intensive fish production systems have important negative consequences for the animals including impaired health and erratic behaviour. For many industries their main goal is to achieve higher production whilst majority of the time welfare is not taken into consideration. Better conditions for intensively produced farm animals including fish should result in improved efficiency and performance and higher quality product for consumers. We welcome papers demonstrating such effects. This research topic is related to the welfare of farmed fish. Fish welfare is related to how we treat our fish, the type of feed, how often we feed them, the stocking density that it is used, the environment where they are growing, how we grow them from fertilized egg to fish ready to sell for public consumption. This Research Topic should address fish welfare during the whole growth period and may also include papers on the attitudes and perceptions of stakeholders including fish farmers and public about fish welfare. understanding of the ecology of a fish pond is essential for the achievement of steady and high fish production in ponds. For

the ecologist the fish pond is a small laboratory easy to investigate and responding rapidly to manipulation For the aquaculturist the ecology shows the ways and means of interventions ensuring an increase of production The book deals with the different aspects of natural production within a pond referring it to African conditions considering first the role of soil as source and sink of nutrients for the water then nutrient cycling within water and the fate of fertilizers added to ponds and finally the contribution of natural productivity to fish production The important sum of information brought together in this volume is valuable for both aquaculturist and ecologist who lack a handbook on the ecology of a fish pond It will capture the interest of African aquaculturists and stimulate aquaculture research on natural production **Inbreeding and Brood**
