corporations richer Every time we Google something Facebook someone Uber somewhere or even just turn on a light we create data that businesses collect and use to make decisions about us In many ways this has improved our lives yet we as individuals do not benefit from this wealth of data as much as we could Moreover whether it is a bank evaluating our credit worthiness an insurance company determining our risk level or a potential employer deciding whether we get a job it is likely that this data will be used against us rather than for us In Data for the People Andreas Weigend draws on his years as a consultant for commerce education healthcare travel and finance companies to outline how Big Data can work better for all of us As of today how much we benefit from Big Data depends on how closely the interests of big companies align with our own Too often outdated standards of control and privacy force us into unfair contracts with data companies but it doesn't have to be this way Weigend makes a powerful argument that we need to take control of how our data is used to actually make it work for us Only then can we the people get back more from Big Data than we give it Big Data is here to stay Now is the time to find out how we can be empowered by it

Ecological Intensification of Natural Resources for Sustainable Agriculture Manoj Kumar Jhariya, Ram Swaroop Meena, Arnab Banerjee, 2021-03-07 Ecological intensification involves using natural resources such as land water soil

nutrients and other biotic and abiotic variables in a sustainable way to achieve high performance and efficiency in agricultural yield with minimal damage to the agroecosystems. With increasing food demand, there is high pressure on agricultural systems. The concept of ecological intensification presents the mechanisms of ensuring high agricultural productivity by restoring the soil health and landscape ecosystem services. The approach involves the replacement of anthropogenic inputs with eco-friendly and sustainable alternatives. Effective ecological intensification requires an understanding of ecosystem services, ecosystem components, and flow of resources in the agroecosystems. Also, awareness of land use patterns, socio-economic factors, and needs of the farmer community plays a crucial role. It is therefore essential to understand the interaction of ecosystem constituents within the extensive agricultural landscape. The editors critically examined the status of ecological stress in agroecosystems and address the issue of ecological intensification for natural resources management. Drawing upon research and examples from around the world, the book is offering an up-to-date account and insight into the approaches that can be put in practice for poly-cropping systems and landscape-scale management to increase the stability of agricultural production systems to achieve ecological resilience. It further discusses the role of farmer communities and the importance of their awareness about the issues. This book will be of interest to teachers, researchers, climate change scientists, capacity builders, and policymakers. Also, the book serves as additional reading material for undergraduate and graduate students of agriculture, forestry, ecology, agronomy, soil science, and environmental sciences. National and international agricultural scientists, policymakers, will also find this to be a useful read for green future.

Wallace's Farmer, 2015 **Alternative Feed Ingredients for Sustainable Livestock Production** Juana Catarina

Cariri Chagas, Gabriel Da Silva Viana, Marcos Inacio Marcondes, 2025-08-12 Population growth and rising incomes in developing countries are leading to an increasing demand for animal products. As limited possibilities exist to increase the area of arable land, food production depends on an increase in crop yield per hectare. However, more than 70% of global agricultural land is already used to produce feed to support livestock production. Moreover, the remaining arable land available is used for food and fuel, and in the upcoming years, due to the consequences of climate change and global warming, some of this land will be compromised through droughts and desertification. Therefore, using ingredients such as non-human edible products, native crops, and by-products in animal feed is necessary and unavoidable. *If It Sounds Like a Quack...*

Matthew Hongoltz-Hetling, 2023-04-04 A Pulitzer Prize finalist's bizarre journalistic journey through the world of fringe medicine filled with leeches, baking soda IVs, and according to at least one person, zombies. It's no secret that American health care has become too costly and politicized to help everyone. So where do you turn if you can't afford doctors or don't trust them? In this book, Matthew Hongoltz-Hetling examines the growing universe of non-traditional treatments, including some that are really non-traditional. With costs skyrocketing and anti-science sentiment spreading, the so-called medical freedom

movement has grown Now it faces its greatest challenge going mainstream In these pages you ll meet medical freedom advocates including an international leech smuggler a gold miner turned health drink salesman who may or may not be from the Andromeda galaxy and a man who says he can turn people into zombies with aerosol spray One by one these alternative healers find customers then expand and influence always seeking the one thing that would take their businesses to the next level the support and approval of the government Should the government dictate what is medicine and what isn t Can we have public health when disagreements over science are this profound No seriously can you turn people into flesh eating zombies If It Sounds Like a Quack asks these critical questions while telling the story of how we got to this improbable moment and wondering where we go from here Buckle up for a bumpy ride unless you re against seatbelts Normal
