**Information Modelling and Knowledge Bases XXXI** Ajantha Dahanayake,Janne Huiskonen,Yasushi Kiyoki,Bernhard Thalheim,Hannu Jaakkola,Naofumi Yoshida,2020-01-06 Information modeling and knowledge bases have become an important area of academic and industry research in the 21st century addressing complexities of modeling that reach beyond the traditional borders of information systems and academic computer science research This book presents 32 reviewed selected and updated papers delivered at the 29th International Conference on Information Modeling and Knowledge Bases EJC2019 held in Lappeenranta Finland from 3 to 7 June 2019 In addition two papers based on the keynote presentations and one paper edited from the discussion of the panel session are included in the book The conference provided a forum to

exchange scientific results and experience and attracted academics and practitioners working with information and knowledge. The papers cover a wide range of topics ranging from knowledge discovery through conceptual and linguistic modeling, knowledge and information modeling and discovery, cross-cultural communication and social computing, environmental modeling and engineering, and multimedia data modeling and systems to complex scientific problem solving. The conference presentation sessions Learning and Linguistics, Systems and Processes, Data and Knowledge Representation, Models and Interface Formalizations, and Reasoning, Models and Modeling, Machine Learning, Models and Programming, Environment and Predictions, and Emotion Modeling and Social Networks reflect the main themes of the conference. The book also includes 2 extended publications of keynote addresses: Philosophical Foundations of Conceptual Modeling and Sustainable Solid Waste Management using Life Cycle Modeling for Environmental Impact Assessment, as well as additional material covering the discussion and findings of the panel session Providing an overview of current research in the field, the book will be of interest to all those working with information systems, information modeling, and knowledge bases.

*Applied Computer Science for GGOS Observatories* Alexander N.J. Neidhardt, 2017-08-08. This book combines elementary theory from computer science with real-world challenges in global geodetic observation based on examples from the Geodetic Observatory Wettzell, Germany. It starts with a step-by-step introduction to developing stable and safe scientific software to run successful software projects. The use of software toolboxes is another essential aspect that leads to the application of generative programming. An example is a generative network middleware that simplifies communication. One of the book's main focuses is on explaining a potential strategy involving autonomous production cells for space geodetic techniques. The complete software design of a satellite laser ranging system is taken as an example. Such automated systems are then combined for global interaction using secure communication tunnels for remote access. The network of radio telescopes is used as a reference. Combined observatories form coordinated multi-agent systems and offer solutions for operational aspects of the Global Geodetic Observing System (GGOS) with regard to Industry 4.0.
