

Reflection and Refraction Vocabulary

Reflection – When light, heat or sound is bounced off of a surface or object without being absorbed.

Law of Reflection – The law of reflection states that the Angle of Incidence (the angle that the light comes in at) is equal to the Angle of Reflection (the angle that the light leaves at).

PLANE MIRROR

The Normal – The normal is a perpendicular (90°) line that is drawn at the point where an incoming ray of light strikes the surface.

Incident Angle – The angle located between the incoming ray of light, and the drawn normal. (INSIDE ANGLE)

Reflected Angle – The angle located between the reflecting ray of light, and the drawn normal. (INSIDE ANGLE)

Regular Reflection – When parallel rays of light hit a smooth surface, they reflect at the same angle and produce a sharp, clear reflection.

Diffuse Reflection – When parallel rays of light hit a bumpy, rough, uneven surface, they reflect at different angles, produce an unclear reflection.

(Each ray of light still follows the law of reflection, but they hit the surface at different angles because of the uneven surface)
