

## Chapter 1: Getting Started with Python

### *Setting Up Your Python Environment*

In this chapter, we'll embark on our Python journey. First, let's install Python. Visit [python.org](https://python.org) and download the latest version for your operating system. Once installed, open a command prompt or terminal and type `python`. You should see the Python version and the interactive shell prompt `>>>`.

Example:

```
>>> print("Hello, Python!")
```

**Hello, Python!**

## Chapter 2: Variables and Data Types

### *Storing and Manipulating Data*

In Python, variables are used to store data. You can declare a variable like this:

```
name = "John"
```

```
age = 30
```

```
height = 5.9
```

Here, `name` is a string, `age` is an integer, and `height` is a float.

Example:

```
name = "John"
```

```
print("Hello, my name is", name)
```

## Chapter 3: Control Structures

### *Making Decisions and Looping*

Conditional statements allow your program to make decisions. For instance, consider a program to check if a number is even:

```
num = 10
```

```
if num % 2 == 0:
```

```
    print(num, "is even")
```

```
else:
```

```
    print(num, "is odd")
```
