$$\varphi(\lambda) = \frac{\xi_1^2 \alpha_1^2}{(\alpha_1^2 + \lambda)^2} + \frac{\xi_2^2 \alpha_2^2}{(\alpha_2^2 + \lambda)^2} = 1.$$

Student Research Projects In Calculus Solutions:

Student Research Projects in Calculus Marcus S. Cohen, 1991 Changing the way students learn calculus at New Mexico State University In the Spring of 1988 Marcus Cohen Edward D Gaughan Arthur Knoebel Douglas S Kurtz and David Penegelley began work on a student project approach to calculus For the next two years most of their waking hours and some of their dreams would be devoted to writing projects for their students and discovering how to make the use of projects in calculus classes not only successful but practical as well A grant from the National Science Foundation made it possible for this experiment to go forward on a large scale The enthusiasm of the original group of five faculty was contagious and soon other members of the department were also writing and using projects in their calculus classes At the present time about 80% of the calculus students at New Mexico State University are doing projects in their Calculus courses Teachers can use their methods in teaching their own calculus courses Student Research Projects in Calculus provides teachers with over 100 projects ready to assign to students in single and multivariable calculus The authors have designed these projects with one goal in mind to get students to think for themselves Each project is a multistep take home problem allowing students to work both individually and in groups The projects resemble mini research problems Most of them require creative thought and all of them engage the student's analytic and intuitive faculties the projects often build from a specific example to the general case and weave together ideas from many parts of the calculus Project statements are clearly stated and contain a minimum of mathematical symbols Students must draw their own diagrams decide for themselves what the problem is about and what tools from the calculus they will use to solve it This approach elicits from students an amazing level of sincere questioning energetic research dogged persistence and conscientious communication Each project has accompanying notes to the instructor reporting students experiences The notes contain helpful information on prerequisites list the main topics the project explores and suggests helpful hints The authors have also provided several introductory chapters to help instructors use projects successfully in their classes and begin to create their own

Research in Collegiate Mathematics

Education II James J. Kaput, Ed Dubinsky, Alan H. Schoenfeld, 1996 The field of research in collegiate mathematics education has grown rapidly over the past 25 years Many people are convinced that improvement in mathematics education can only come with a greater understanding of what is involved when a student tries to learn mathematics and how pedagogy can be more directly related to the learning process Today there is a substantial body of work and a growing group of researchers addressing both basic and applied issues of mathematics education at the collegiate level This second volume in Research in Collegiate Mathematics Education begins with a paper that attends to methodology and closes with a list of questions The lead off paper describes a distinctive approach to research on key concepts in the undergraduate mathematics curriculum This approach is distinguished from others in several ways especially its integration of research and instruction The papers in this volume exhibit a large diversity in methods and purposes ranging from historical studies to theoretical examinations of

the role of gender in mathematics education to practical evaluations of particular practices and circumstances As in RCME I this volume poses a list of questions to the reader related to undergraduate mathematics education The eighteen questions were raised at the first Oberwolfach Conference in Undergraduate Mathematics Education which was held in the Fall of 1995 and are related to both research and curriculum This series is published in cooperation with the Mathematical Association of America Mathematical Thinking and Problem Solving Alan H. Schoenfeld, Alan H. Sloane, 2016-05-06 In the early 1980s there was virtually no serious communication among the various groups that contribute to mathematics education mathematicians mathematics educators classroom teachers and cognitive scientists Members of these groups came from different traditions had different perspectives and rarely gathered in the same place to discuss issues of common interest Part of the problem was that there was no common ground for the discussions given the disparate traditions and perspectives As one way of addressing this problem the Sloan Foundation funded two conferences in the mid 1980s bringing together members of the different communities in a ground clearing effort designed to establish a base for communication In those conferences interdisciplinary teams reviewed major topic areas and put together distillations of what was known about them A more recent conference upon which this volume is based offered a forum in which various people involved in education reform would present their work and members of the broad communities gathered would comment on it The focus was primarily on college mathematics informed by developments in K 12 mathematics The main issues of the conference were mathematical thinking and problem solving
