The Central Engine of Active Galactic Nuclei Luis C. Ho, Jian-Min Wang, 2007 **X-ray Studies of the Central Engine in Active Galactic Nuclei with Suzaku** Hirofumi Noda, 2015-12-07 The aim of this research was to use the X ray satellite Suzaku to establish a picture of a central engine that effectively converts the gravitational energy of accreting matter onto the supermassive black hole to a huge amount of radiation in an active galactic nucleus Although the engine is known to consist of a Comptonizing corona and an accretion disk its image has remained unclear because primary emissions coming directly from the engine cannot be identified in X ray spectra without models The book describes a technique of time variability assisted spectral decomposition to model independently examine X ray signals and how this was applied to the Suzaku archive data of active galactic nuclei As a result at least three distinct primary X ray components have been discovered in an X ray from an active galactic nucleus presumably indicating a novel picture that the engine is composed of multiple coronae with different physical properties in an accretion flow Furthermore the determination of the spectral shapes of the primary X rays has a significant impact on estimations of black hole spins because it is essential to quantify reprocessed X ray spectra The successful model independent decomposition of X ray spectral components with flux variations of active galactic nuclei is likely to be effective in future data analyses from the soon to be launched Japanese X ray satellite ASTRO H which is capable of achieving unprecedented fine spectroscopy and broad energy band coverage **The Road to Reality** Roger Penrose, 2021-06-09 WINNER OF THE 2020 NOBEL PRIZE IN PHYSICS The Road to Reality is the most important and ambitious work of science for a generation It provides nothing less than a comprehensive account of the physical universe and the essentials of its underlying mathematical theory It assumes no particular specialist knowledge on the part of the reader so that for example the early chapters give us the vital mathematical background to the physical theories explored later in the book Roger Penrose's purpose is to describe as clearly as possible our present understanding of the universe and to convey a feeling for its deep beauty and philosophical implications as well as its intricate logical interconnections The Road to Reality is rarely less than challenging but the book is leavened by vivid descriptive passages as well as hundreds of hand drawn diagrams In a single work of colossal scope one of the world's greatest scientists has given us a complete and unrivalled guide to the glories of the universe that we all inhabit Roger Penrose is the most important physicist to work in relativity theory except for Einstein He is one of the very few people I've met in my life who without reservation I call a genius Lee Smolin International Aerospace Abstracts, 1992 Physics of Active Galactic Nuclei at All Scales Danielle Alloin, 2006-07-24 This book contains a collection of lecture notes written by recognized experts in the field of Active Galactic Nuclei AGN The collection is aimed at providing both an introduction and at the same time an overview of the state of the art of AGN research This book also addresses the still not entirely understood link of an AGN with its host galaxy and also the related question of the birth and growth of massive black holes in the Universe *X-ray and Gamma-ray*
