arbitrary application programs to run concurrently The text uses a small elegant system named Xinu as an example to illustrate the concepts and principles and make the discussion concrete Because an operating system must deal with the underlying hardware the text shows examples for the two basic computer architectural approaches used in the computer industry CISC and RISC Readers will see that most of the code remains identical across the two architectures and they can easily compare the differences among the machine dependent pieces such as hardware initialization code device interface code and context switch code Xinu code is freely available and readers are strongly encouraged to download the system and experiment by making modifications or extensions The Xinu web page <https://xinu.cs.purdue.edu> contains links to the code from the book as well as instructions on how to run Xinu on experimenter hardware boards The page also provides links to a version that runs on the free VirtualBox hypervisor A reader can install VirtualBox on their laptop or desktop and then run Xinu without the need for additional hardware
