## **Static Compensators Statcoms In Power Systems:**

*Static Compensators (STATCOMs) in Power Systems* Farhad Shahnia, Sumedha Rajakaruna, Arindam Ghosh, 2014-12-01 A static compensator STATCOM also known as static synchronous compensator is a member of the flexible alternating current transmission system FACTS devices. It is a power electronics based regulating device which is composed of a voltage source converter VSC and is shunt connected to alternating current electricity transmission and distribution networks. The voltage source is created from a DC capacitor and the STATCOM can exchange reactive power with the network. It can also supply some active power to the network if a DC source of power is connected across the capacitor. A STATCOM is usually installed in the electric networks with poor power factor or poor voltage regulation to improve these problems. In addition, it is used to improve the voltage stability of a network. This book covers STATCOMs from different aspects. Different converter topologies, output filters, and modulation techniques utilized within STATCOMs are reviewed. Mathematical modeling of STATCOM is presented in detail, and different STATCOM control strategies and algorithms are discussed. Modified load flow calculations for a power system in the presence of STATCOMs are presented. Several applications of STATCOMs in transmission and distribution networks are discussed in different examples, and optimization techniques for defining the optimal location and ratings of the STATCOMs in power systems are reviewed. Finally, the performance of the network protection scheme in the presence of STATCOMs is described. This book will be an excellent resource for postgraduate students and researchers interested in grasping the knowledge on STATCOMs.

Modeling and Simulation of a Static Synchronous Compensator (STATCOM) for the UI Analog Model Power System Achyut Lamichhane, 2014. Fast efficient dynamic reactive power compensation is important for maintaining voltage stability on the electric power grid as a whole as well as maintaining local voltage regulation to the customer. Dynamic reactive compensation is discussed in several courses in the ECE program. In this presentation the design and modeling of a static synchronous compensator STATCOM that can be connected to the Analog Model Power System AMPS at the University of Idaho for classroom instruction will be presented. Detailed averaged and switching models of a STATCOM will be presented. The goal of the modeling is to replicate the real world behavior of the STATCOM interfaced with the AMPS which will provide a basis for class projects and studies related to the reactive power compensation to the AMPS. After developing the modeling of the STATCOM interfaced with the AMPS simulations will be run to verify the STATCOM works as intended. The results from the simulations lay the foundations for the implementation for the hardware implementation of the STATCOM to improve upon one that was developed by a senior design team.
