## **Statistical Issues In Drug Development:**

Statistical Issues in Drug Development Stephen S. Senn, 2008-02-28 Drug development is the process of finding and producing therapeutically useful pharmaceuticals turning them into safe and effective medicine and producing reliable information regarding the appropriate dosage and dosing intervals. With regulatory authorities demanding increasingly higher standards in such developments, statistics has become an intrinsic and critical element in the design and conduct of drug development programmes. Statistical Issues in Drug Development presents an essential and thought-provoking guide to the statistical issues and controversies involved in drug development. This highly readable second edition has been updated to include comprehensive coverage of the design and interpretation of clinical trials. Expanded sections on missing data, equivalence meta analysis and dose finding. An examination of both Bayesian and frequentist methods. A new chapter on pharmacogenomics and expanded coverage of pharmaco epidemiology and pharmaco economics. Coverage of the ICH guidelines in particular ICH E9 Statistical Principles for Clinical Trials. It is hoped that the book will stimulate dialogue between statisticians and life scientists working within the pharmaceutical industry. The accessible and wide ranging coverage make it essential reading for both statisticians and non-statisticians working in the pharmaceutical industry, regulatory bodies and medical research institutes. There is also much to benefit undergraduate and postgraduate students whose courses include a medical statistics component.

Statistical Issues in Drug Research and Development Karl E. Peace, 2017-09-19 This book is a compilation of topics addressed by the ASA Biopharmaceutical Section work groups including the etiology and evolution of the work groups, the work group guidelines and structure, and the statistical issues associated with clinical trials in clinical drug development programs.

Statistical Issues in Drug Development Stephen S. Senn, 2021 This will be the third edition of Statistical Issues in Drug Development and will be fully revised and updated to include information on the latest industry standards and guidelines. Both the first 1997 and second 2007 editions were very well received and the book has become a standard. This book is unique in providing a thorough and critical discussion of the most important and controversial issues encountered by statisticians and their life scientist colleagues on both sides of the regulatory divide in drug development. The primary purpose of the book is to encourage and facilitate discussion between statisticians and their colleagues of the many complex statistical issues that arise in drug development. The book will be suitable as a course of self instruction for statisticians who are new to the pharmaceutical industry either because of recent graduation or change of career. It will also act as an authoritative reference for those working in drug development and provide possible topics for discussion in journal forums.
