Gummer, 2021 This volume brings together experts on various aspects of education to address many of the emerging issues and problems that affect how data are being used or misused in educational contexts. The text covers data ethics in local education agencies, professional development, educator preparation, testing programs, and educational technology. Chapter authors recommend steps to improve awareness among educators, stakeholders, and other interested groups, and suggest actions that can be taken to enhance educators' capacity to use data responsibly. Exercises in Statistical Reasoning Michael R. Schwob,Yunshan

Duan,Beatrice Cantoni,Bernardo Flores-Lopez,Stephen G. Walker,2025-04-07 Students cultivate learning techniques in school that emphasize procedural problem solving and rote memorization This leads to efficient problem solving for familiar problems However conducting novel research is an exercise in creative problem solving that is at odds with a procedural approach it requires thinking deeply about the topic and crafting solutions to unique problems It is not easy to move from a topic based carefully curated curriculum to the daunting world of independent research where solutions are unknown and may not even exist In developing this book we considered our experiences as graduate students that faced this transition Exercises in Statistical Reasoning is a collection of exercises designed to strengthen creative problem solving skills The exercises are designed to encourage readers to understand the key points of a problem while seeking knowledge rather than separating out these two activities To complete the exercises readers may need to reference the literature which is how research based knowledge is often acquired Features of the Exercises The exercises are self contained though several build

upon concepts from previous problems Each exercise opens with a brief introduction that emphasizes the relevance of the content Then the problem statement is presented as a series of intermediate questions For each exercise we suggest one possible solution though many may exist Following each solution we discuss the historical background of the content and points of interest For many exercises a brief demonstration is provided that illustrates relevant concepts There is an abundance of high quality textbooks that cover a vast range of statistical topics However there is also a lack of texts that focus on the development of problem solving techniques that are required for conducting novel statistical research We believe that this book helps fill the gap Any reader familiar with graduate level classical and Bayesian statistics may use this book The goal is to provide a resource that such students can use to ease their transition to conducting novel research
