It is recommended that the Power-Blocker™ system be used in conjunction with other de-icing systems, such as a power cable and snowplow, for maximum efficiency. It is recommended that cables and controllers not be exposed to direct sunlight. The system has options to turn the cables on and off from the front of a plow and trailer units.

**Resources in Education** ,1990 **GIS And Generalisation** J-P Lagrange,R Weibel,Jean-Claude Muller,2020-11-25 This text is the inaugural book in Taylor and Francis's GISDATA series and is derived from the specialist workshop convened under the auspices of the European Science Foundation's GISDATA Scientific Programme. Generalisation is an integrating tool for the analysis and presentation of spatial data. Effective spatial data analysis requires multiple views of the world at various scales with different thematic layers of representation. Generalisation is a key mechanism in this process as it filters out information which is required for particular scales or layers; hence it is critical to implement full and comprehensive generalisation capabilities in a GIS something with which few current GIS are equipped. This book overviews the core and as yet unresolved issues surrounding the achievement of this goal and presents various alternatives both speculative views and practical examples in the areas of automated generalisation vis à vis problems such as object simplification and placement. At the same time it distinguishes between modelling with generalisation and graphical representation and adopts a model building perspective. It also describes artificial intelligence techniques for implementing automated generalised routines and addresses issues of data quality and production. The text is organized into six parts: an introduction, generic issue, object orientated methods and knowledge based modelling, knowledge acquisition and representation, data quality and operation and implementation.
