Startling Stereograms:

Startling Stereograms Gene Levine, Gary Priester, 2012-02-01 There s something really magical about a stereogram in fact these stunning designs practically come alive with movement As they tease and surprise our brains they teach us to look at things differently and make us aware of how our eyes play tricks on us And of course they are simply beautiful to see Through the power of illusion and the illustrator s skill meaningless patterns and hidden objects on a 2 D page take shape and pop out in full glorious clearly defined 3 D Images that were flat gain amazing dimension These incredible colorful artistic creations offer unbelievable motion and depth *Exceptional Eye Tricks* Brad Honeycutt, 2013-02-01 Whether they re drawn from nature or art optical illusions can amaze amuse confuse and fool the viewer They remind us that we do not see the world as it is but only filtered through our own perceptions This stunning collection captures the full breadth of the form from composite images and trompe l oeil to tricks of perspective and the absolutely impossible There are ambiguous illusions with multiple meanings depending on how you look such as Dance with Me Can you see the ominous face gazing at a happy couple dancing among the trees If you want to glimpse the magic in a topsy turvy illusion just rotate the page to reveal some hidden imagery Viewed one way The Mysterious Island painted by Hungarian artist Istv n Orosz shows a small ship sailing through an opening in some rocks But turn it upside down and instead there s a portrait of the great author Jules Verne And of course there are illusions where things seem to be the same size when they re really not and others that seem to be in motion when of course they re completely still From a twice as beautiful as one double rainbow to a fully intact wall that appears to have crumbled these mysterious illusions will fascinate and enchant anyone who loves art science and magic

Stereogram , 1994 Stereogram is the generic term for two dimensional images that can appear to be three dimensional Stereogram is a deluxe color book featuring high quality stereogram images This rich collection canvasses the works of today s premier stereo artists *Hidden Treasures* Gene Levine, Gary W. Priester, 2008 A stereogram is a two dimensional image that when viewed properly creates a stunning almost magical impression of depth Objects seem to float or to pop out of patterns And these complex and sophisticated designs produced by two of the most famous stereogram creators in the world are state of the art *Random Dot Stereograms* Andrew A. Kinsman, 1993 Create Stereograms on Your PC Dan Richardson, 1994 Written for the beginner this book introduces the reader to Random Dot Stereograms RDS and many other types of 3D illusions With this book and a very modest home computer the reader can produce their own stereograms The disk contains a complete set of graphics software tools everything needed to create professional quality stereograms

Startling Stories , 1953 **American Photography** , 1916 **A Taxonomy of Visual Processes** William R. Uttal, 2014-06-27 Originally published in 1981 this third volume deals with the empirical data base and the theories concerning visual perception the set of mental responses to photic stimulation of the eyes As the book develops the plan was to present a general taxonomy of visual processes and phenomena It was hoped that such a general perspective would help

to bring some order to the extensive but largely unorganized research literature dealing with our immediate perceptual responses to visual stimuli at the time The specific goal of this work was to provide a classification system that integrates and systematizes the data base of perceptual psychology into a comprehensive intellectual scheme by means of an eclectic multi level metatheory invoking several different kinds of explanation *Three-dimensional Photography* Herbert Couchman McKay,1953 **Seeing, second edition** John P. Frisby,James V. Stone,2010-04-02 An accessible yet rigorous and generously illustrated exploration of the computational approach to the study of biological vision Seeing has puzzled scientists and philosophers for centuries and it continues to do so This new edition of a classic text offers an accessible but rigorous introduction to the computational approach to understanding biological visual systems The authors of Seeing taking as their premise David Marr s statement that to understand vision by studying only neurons is like trying to understand bird flight by studying only feathers make use of Marr s three different levels of analysis in the study of vision the computational level the algorithmic level and the hardware implementation level Each chapter applies this approach to a different topic in vision by examining the problems the visual system encounters in interpreting retinal images and the constraints available to solve these problems the algorithms that can realize the solution and the implementation of these algorithms in neurons Seeing has been thoroughly updated for this edition and expanded to more than three times its original length It is designed to lead the reader through the problems of vision from the common but mistaken idea that seeing consists just of making pictures in the brain to the minutiae of how neurons collectively encode the visual features that underpin seeing Although it assumes no prior knowledge of the field some chapters present advanced material This makes it the only textbook suitable for both undergraduate and graduate students that takes a consistently computational perspective offering a firm conceptual basis for tackling the vast literature on vision It covers a wide range of topics including aftereffects the retina receptive fields object recognition brain maps Bayesian perception motion color and stereopsis MatLab code is available on the book s website which includes a simple demonstration of image convolution **The World's Best Stereograms. Honest!** Gene Levine,Gary Priester,2025-08-20 The World s Best Stereograms Honest is a collection of 80 stunning 3D stereograms created by world renowned artists Gene Levine and Gary Priester Together they have a combined 60 years of experience designing these unique and fascinating works of art During this time they have kept pushing the art of the 3D stereogram as far as it will go and arguably beyond One thing is certain they re not likely to stop anytime soon Gary Priester and Gene Levine know a thing or two about stereograms they have both been making them since the late 1990 s As the technology has developed so have Gary and Gene And if stereograms have developed from a visual curiosity into an art form it is largely because of these two innovative artists Priester and Levine were formally trained in art and design and both were early adapters of computer graphics Their images have been published in dozens of books and magazines **Binocular Vision and Ocular Motility** Gunter K. Von Noorden,1990 *Ask Dr. Mike* Michael Atkinson,2001 The questions in this book pinpoint issues about which

many introductory psychology students may be curious with a view to enhancing their interest in the course Users of The Psychology Place Website will be familiar with this question and answer format and should be able to integrate it easily into their classes **Camera** ,1916 **The New Yorker** ,2006 Photogrammetric Engineering ,1972-07 Journal of the Society of Motion Picture Engineers Society of Motion Picture Engineers,1941 *Medical Record* George Frederick Shrady,Thomas Lathrop Stedman,1906 **Laboratory Manual in Physical Geology** Richard M. Busch,American Geological Institute,National Association of Geoscience Teachers,2006 Revised throughout for enhanced clarity and accuracy and with a greater emphasis on the process of science this user friendly best selling laboratory manual examines the basic principles of geology and their applications to everyday life Students are encouraged to view these principles in terms of natural resources natural hazards and human risks This trusted resource features contributions from highly regarded geologists and geoscience educators with an exceptional illustration program by Dennis Tasa
