Zaal, 2013-12-01 Over the last 20 years there have been a large number of technical advances and changes in the field of educational and psychological testing According to Anne Anastasi The decade of the 1980 s has been a period of unusual advances in psychological testing Technological progress theoretical sophistication and increasing professional responsibility are all evident in the fast moving events in this field A Anastasi *Psychological Testing* Sixth Edition New York Macmillan 1988 On the psychometric front advances in topics such as item response theory criterion referenced measurement generalizability theory analysis of covariance structures and validity generalization are reshaping the ways that ability and achievement tests are constructed and evaluated and that test scores are interpreted But Jsychometric advances as substantial and important as they have been are only a fraction of the major changes in the field of testing Today for example the computer is radically changing the ways in which tests are constructed administered and scored Computers are being used to administer tests adaptively That is the sequence of questions an examinee is administered depends upon his or her performance on earlier administered items in the test Tests are adapted to the ability levels of the examinees who

are being assessed One result is shorter tests with little or no loss in measurement precision Computers are also being used to store or bank test items Later items of interest can be selected and the computer is used to print copies of the test
