A large monitor in the background shows a peaceful scene of a small wooden house with a blue door and windows, surrounded by green trees and a grassy field. In the foreground, a laptop displays a field of green plants in rows. To the right of the laptop is a black game controller. Further right, a smartphone shows a warm, orange-toned landscape with mountains. A pair of headphones is on the left side of the desk. A small potted plant sits on a shelf in the upper left, and a lamp with a warm glow is on the right. The overall atmosphere is calm and relaxing.

*Simulation and Gaming for Social Design* Toshiyuki Kaneda, Ryoju Hamada, Terukazu Kumazawa, 2022-01-03  
This book is a collection of research articles that deal with three aspects of simulation and gaming for social design: 1. Theory and methodology including game system theory and agent-based modeling; 2. Sustainability including global warming and the energy-food nexus; and 3. Social entrepreneurship including business, ethnic, and ethical understanding. The latter two especially form two major areas of clinical knowledge in contemporary life. Simulation and gaming with its participatory approach provides participants with a seamless integration of problem solving and education. It has been known as a tool for interdisciplinary communication since the 1960s and now it is being developed to contribute to global society in the twenty-first century. This is the first book on simulation and gaming for social design that covers all aspects from the methodological foundations to practical examples in the fields of sustainability and social entrepreneurship. Regardless of the size of the problematics, societal system design involves: 1. The visioning and conception aspects due to the long-term overall nature of the goal; 2. Interdisciplinary thinking and communication for the exploration of new states of accommodation with technological systems; and 3. The human dimension aspect including education that must be dealt with. Thus, academic developments of simulation and gaming for social design as system thinking and practice methodologies are anticipated. Simulation and gaming has great potential for development as a tool to facilitate the transfer between theoretical and clinical knowledge.
