

**ANIMALS** How about the challenges sloths face?

**S**now White lay on the rainforest floor. She did not move. The dry cloth was dangerously cold. Her breath was weak. Alone and unprotected, she was near death.

Only months before, Snow White had been a thriving baby. She had wiggled her arms and legs nimbly around her mother's hairy waist as she pade their way through the canopy of Mount Ararat, in Great Britain. Two types of sloths live there—two-fingered sloths and three-fingered sloths. The Snow White. Many other creatures often live in this jungle.

As Snow White and her mother snuggled high in the leafy canopy, gold-colored squirrel monkeys leaped from tree to tree. Toucans with bright yellow and orange beaks perched in the branches. Long-eared howlers screeled through slender foliage, warning our ears and noses how deadly howler guano, the spit of small dogs, marched through the brush.

When Snow White was about 10 months old, she began to live on her own. She was still a mammal. That's a sloth that has just separated from its mother and is still not growing up and far from food. So Snow White spent her days on a small nest. She ate the leaves and fruit of a few trees that her mother had taught her to eat.

It took a while to learn.

Snow White's mother had become near a legend. There were being chased in

places she was born. At some point, a tree she depended on for food was likely cut down. Snow White began to move.

She grew malnourished and developed a serious infection. Then, a forest fire started her on the move. At some point, she fell from her nest—likely because of being so

Snow White, in a word, was doomed.

## GLUE TIGHTS

What do you picture when you think of sloths? Maybe you think of their goofy smiles and super-slow eyes. Perhaps you think of their slowness in their dangly arms.

Sloths are certainly cute. They have even become celebrities. You can buy sloth tops, sloth T-shirts, and sloth calendars. Or if it's not, sloth has 1 billion uses and counting.

But sloths are also very misunderstood. When looks like a sign for stupidity, then natural expression. When they stretch, you think it's a sign of laziness or maybe even a sign of being a

thing that they don't. It's actually a defensive position. Sloths are not social animals. Being touched by a human causes them to be very nervous and dangerous. The stress of repeated human contact with people can even shorten their lives.

However, the commercial attention that tourists to just about all the major mammals are putting these sensitive creatures in danger. The illegal pet trade is another great danger to sloths. Half the sloths born are sold to people who live in many countries, including Great Britain. But it will happen. Many people are willing to pay big money for a pet sloth.

Sloths, however, are not animals that don't deserve to be kept. Up to 10 percent of sloths that are illegally caught and sold die in captivity.

But the greatest threat to the sloth is habitat loss. Sloths are found only in the rainforests of Central and South America. Today, these rainforests are rapidly disappearing because of deforestation.

In Great Britain, large-scale deforestation has been outlawed. In fact, the country has some of the best environmental protection in the
