Value Stream Mapping for Lean Development Drew A. Locher, 2008-05-02 Written by one of the world's most respected consultants on Lean, this work presents a methodology for value stream mapping that is appropriate for any organization, whether it be service or product oriented. Over the past 25 years, Locher has proven just how powerful this process is, having employed it in healthcare, transportation, distribution, education, financial services, and manufacturing environments. Illustrating his methodology through the example of the imaginary DevelopTek company, he explains how to identify development waste, assess an organization's current state, and develop a Current State Map. Apply Lean principles to create a Future State Map.

Development of Stream Mapping Frame work with Fuzzy QFD Dr. Ashad Ullah Qureshi, 2022-06-01 The manufacturing systems have been witnessing a key transition from mass manufacturing to lean manufacturing. Mass manufacturing focuses on high volume production with limited product variety. Lean manufacturing is focused on elimination of wastes, thereby streamlining the processes and facilitating cost reduction.

Value Stream Mapping and Earned Value Management Ryan Brent Whitaker, Massachusetts Institute of Technology. Engineering Systems Division, 2005 The concepts of value and value stream are crucial to the philosophy of Lean, and a better understanding of how these concepts relate to product development (PD) is essential for the creation of a Lean PD strategy. This thesis focuses on value by looking at PD processes through two different value perspectives: Product Development Value Stream Mapping and Earned Value Management. Product Development Value Stream Maps (PDVSMs) were created for two different PD projects, and the tasks from the maps were analyzed for how they each create value. The official value measurement for the two projects, Earned Value Management System data, was analyzed and compared to the PDVSMs. This comparison of the two value perspectives proved valuable as it showed that, despite some misalignments, they are congruent. The comparison also highlighted several flaws in EVMS. Finally, a combined EVMS/PDVSM hybrid management tool is proposed and discussed.

Untangling with Value Stream Mapping Ovidiu Contrás, 2022-04-05 The standard belief in books about Lean initiatives and value stream mapping VSM is that VSM works well on transactional processes which are primarily linear processes where handoffs are well defined and the outcome is known and it is useful for repetitive projects or products This book counters these statements by clearly demonstrating how a VSM exercise can be successfully performed in complex multifunctional environments involving nonrepetitive work such as aircraft new product development custom engineering software development and project management The methodology described in this book is the result of more than ten years of refinement and is based on practice while working with multidisciplinary teams and helping them achieve their goals This is a novel approach to capturing the information flow in a VSM by recognizing it as the place where most of the issues are generated especially for the previously mentioned environments and the fact that classical mapping methodologies including classical VSM do not capture it well The VSM methodology that the author developed goes to the essence of a VSM activities flow information flow timeline uses conventional VSM icons and some custom information flow icons and helps the following

Quantifying waste VSM literature gap Making disconnects visible VSM literature gap Making behavioral and cultural patterns visible VSM literature gap If the steps are followed thoroughly then lead time reductions ranging from 60% to 88% are achieved along with increased availability of resources more output with the same resources projects delivered on time and most importantly colleagues embracing the Lean mindset which greatly contributes to maintaining the gains Essentially this book helps readers perform a VSM in environments where multiple stakeholders interact with each other to deliver a product or a service with unclear aspects such as what the product service is how all involved can contribute to the product or service transformation and how the interactions between them occur For example the products services targeted in this book include test results analysis results a custom design a process a methodology an engineering change integrated

Performance Improvement Quarterly ,2005 Value Stream Mapping as a Strategic Tool in Lean Transition

Eduardo Sánchez Sánchez,2004 SUMMARY The main objective of this work of thesis is the formulation of a frame of reference by means of an analysis of the application of a Lean Manufacturing tool Valu Stream Mapping in various processes of diverse companies of different maturity lev is in the Manufacturing sector to help them see the optimizations that can be attained trough the use of this tool In the development of this thesis an investigation of Valu Stream Mapping Lean

Manufacturing tool and its strategy of implementation were made. The author of the present document made a series of practical cases applying this tool with the purpose of making an analysis in order to find the most important elements and than that would be useful to integrate them in a frame of reference. Once realized the analysis the author developed and proposed a model as well as a frame of reference that can serve as guide for people whom they want to use the value stream map tool. The results obtained when applying the practical cases offer interesting results that allow to see the benefits that an organization could obtain when doing use of a tool like this as well as this investigation allows to see possible future investigations that they reinforce and they improve the model and the frame of reference proposed here.

The Complete Lean Enterprise Beau Keyte, Drew A. Locher, 2004-07-30 Winner of the 2005 Shingo Prize for Excellence in Manufacturing Research. Most lean initiatives conducted by manufacturers are focused mostly on shop floor activities mapping the value stream of raw material to the shop floor customer. Much of the untapped potential for productivity improvements lies however in non shop floor activities.
