

## Extensions and Adapters: Adjustable

When using an extension or adapter (increasing the effective length of the torque wrench) the output torque value will change. To calculate the new torque output of the wrench use the following formula:

$$A = \frac{L + C}{L} \times B$$

A = Torque exerted at the end of adapter  
L = Distance between square drive and hand position  
B = Wrench scale reading  
C = Length of adapter or extension

A number of variables including the length of the adapter or extension, length of the wrench, and variations in hand position on the wrench will affect the accuracy of the above calculation

## Operation: Adjustable

## Standard

We calibrate each torque wrench at the factory using torque standards according to DIN ISO 6789 and ASME B107.14M-2004, and certify it meets the accuracy requirements of specifications DIN ISO 6789 and ASME B107.14M-2004.
