

The Statistics of Inheritance

How can statistics help predict the traits of offspring?

Why?

The randomization of alleles from the parents' genetic material is essential to the survival and evolution of a species. If the combinations of alleles that make up the genetic material in a zygote are truly random, the laws of statistics can be used to predict what traits the offspring will have. This activity starts with a review of Punnett squares, which is one way to make predictions about simple allele combinations. Statistics will then be used to make mathematical predictions about the genotypes of offspring.

- Consider the beetle species in Model 1.
 - How many phenotypes for exoskeleton color are exhibited in the population? What are they?
 - How many genotypes for exoskeleton color are exhibited in the population? What are they?
- According to Model 1, which allele, B or b, is the dominant exoskeleton color allele? Justify your answer with specific evidence from Model 1.
- The Punnett squares in Model 1 show the possible outcomes for an offspring resulting from the mating of two beetles.
 - Which Punnett square shows a cross between two homozygous beetles?
 - Which Punnett square shows a cross between a heterozygous beetle and a homozygous recessive beetle?
- Briefly describe how the genotypes inside of the Punnett squares representing the possible outcomes for an offspring are determined.
- Complete the Punnett square for cross D in Model 1. Include drawings to show the phenotypes possible for the offspring that would result.
- Refer to Model 1.
 - In which of the crosses is there a 100% chance that the beetle offspring will have a black exoskeleton?
 - In which of the crosses is the probability 0.75 that the beetle offspring will have a black exoskeleton?
- For cross D in Model 1, what is the probability that the beetle offspring will have a Bb genotype? Show a mathematical calculation to support your answer.

The Survey ,1923 Parliamentary Debates (Hansard). Great Britain. Parliament. House of Commons,2005

Closing the tax gap Great Britain: Parliament: House of Commons: Treasury Committee,2012-03-09 This Treasury Committee report considers HM Revenue Customs past work in ensuring tax compliance and concludes that while progress has been made there is still work to be done HMRC defines the tax gap as the difference between tax collected and the tax that should be collected the theoretical liability The theoretical tax liability represents the tax that would be paid if all individuals and companies complied with both the letter of the law and HMRC's interpretation of the intention of Parliament in setting law referred to as the spirit of the law Enabling voluntary compliance is the most efficient way of closing the tax gap and HMRC must ensure that all those who wish to comply with their tax obligations are able to do so Part of the process of encouraging voluntary compliance is demonstrating that HMRC treats all taxpayers fairly whether they are individuals small businesses or large corporations The tax system should be simplified to make compliance easier HMRC's recent announcement of ways it intends to improve its processes for settling tax disputes is a step forward in the context of wider questions needing to be answered about the accountability structures of HMRC HMRC's calculation of the tax gap is flawed and risks focusing the minds of its employees on the wrong task maximising revenue at all cost rather than ensuring that all taxpayers pay the right amount of tax Introductory Statistics Neil A.
